The Portfolio is intended to be a funding vehicle for variable annuity contracts and variable life insurance policies (collectively, variable insurance contracts) offered by the separate accounts of various insurance companies. Portfolio shares may also be offered to qualified pension and retirement plans and accounts permitting accumulation of assets on a tax-deferred basis (Eligible Plans). The investment objective (also known as the Portfolio's goal) and policies of the Portfolio may be similar to other funds managed or advised by J.P. Morgan Investment Management Inc. and its affiliates. However, the investment results of the Portfolio may be higher or lower than, and there is no guarantee that the investment results of the Portfolio will be comparable to, any other J.P. Morgan Fund.

Risk/Return Summary

JPMorgan Insurance Trust Income Builder Portfolio

What is the goal of the Portfolio?

The Portfolio seeks to maximize income while maintaining prospects for capital appreciation.

Fees and Expenses of the Portfolio

The following table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Portfolio.

“Acquired Fund Fees and Expenses” are expenses incurred indirectly by the Portfolio through its ownership of shares in other investment companies, including affiliated money market funds, other mutual funds, exchange-traded funds and business development companies. The impact of Acquired Fund Fees and Expenses is included in the total returns of the Portfolio.

Acquired Fund Fees and Expenses are not direct costs of the Portfolio, are not used by the Portfolio to calculate its net asset value per share and are not included in the calculation of the ratio of expenses to average net assets shown in the Financial Highlights section of the Portfolio’s prospectus. The table and Example below do not reflect fees and expenses imposed at the variable insurance contract level or which may be imposed by Eligible Plans. If these expenses were reflected, the total expenses would be higher.

ANNUAL FUND OPERATING EXPENSES (Expenses that you pay each year as a percentage of the value of your investment)	
	Class 2
Management Fees	0.42%
Distribution (Rule 12b-1) Fees	0.25
Other Expenses	0.47
Acquired Fund Fees and Expenses	<u>0.04</u>
Total Annual Fund Operating Expenses	1.18
Fee Waivers and/or Expense Reimbursements¹	<u>-0.29</u>
Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements¹	0.89

¹ The Portfolio’s adviser and/or its affiliates have contractually agreed to waive fees and/or reimburse expenses to the extent Total Annual Fund Operating Expenses (excluding Acquired Fund Fees and Expenses other than certain money market fund fees as described below, dividend and interest expenses related to short sales, interest, taxes, expenses related to litigation and potential litigation, expenses related to trustee elections, and extraordinary expenses) exceed 0.85% of the average daily net assets of Class 2 Shares. The Portfolio may invest in one or more money market funds advised by the adviser or its affiliates (affiliated money market funds). The Portfolio’s adviser, shareholder servicing agent and/or administrator have contractually agreed to waive fees and/or reimburse expenses in an amount sufficient to offset the respective net fees each collects from the affiliated money market funds on the Portfolio’s investment in such money market funds. These waivers are in effect through 4/30/23, at which time it will be determined whether such waivers will be renewed or revised. To the extent that the Portfolio engages in securities lending, affiliated money market fund fees and expenses resulting from the Portfolio’s investment of cash received from securities lending borrowers are not included in Total Annual Fund Operating Expenses and therefore, the above waivers do not apply to such investments.

Example

This Example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Portfolio for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Portfolio’s operating expenses are equal to the total annual fund operating expenses after fee waivers and expense reimbursements shown in the fee table through 4/30/23 and total annual fund operating expenses thereafter. Your actual costs may be higher or lower.

WHETHER OR NOT YOU SELL YOUR SHARES, YOUR COST WOULD BE:				
	1 Year	3 Years	5 Years	10 Years
CLASS 2 SHARES (\$)	91	346	621	1,406

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses, or in the Example, affect the Portfolio’s performance. During the Portfolio’s most recent fiscal year, the Portfolio’s turnover rate was 67% of the average value of its portfolio.

What are the Portfolio’s main investment strategies?

The Portfolio has significant flexibility to achieve its investment objective and invests in a broad range of income-producing securities, including debt and equity securities in the U.S. and other markets throughout the world, both developed and emerging. There is no limit on the number of countries in which the Portfolio may invest, and the Portfolio may focus its investments in a single country or a small group of countries. As attractive investments across asset classes and strategies arise, the adviser attempts to capture these opportunities and has wide latitude to allocate the Portfolio’s assets among strategies and asset classes. J.P. Morgan Investment Management, Inc. (JPMIM or the adviser) buys and sells securities and investments for the Portfolio based on the adviser’s view of strategies, sectors, and overall portfolio construction taking into account income generation, risk/return analyses, and relative value considerations.

The Portfolio may invest up to 100% of its total assets in debt securities and other types of investments that are below investment grade. With respect to below investment grade debt securities (known as junk bonds), the Portfolio currently expects to invest no more than 70% of its total assets in such securities. The Portfolio may also invest up to 35% of its total assets in loan assignments and participations (Loans) and commitments to purchase loan assignments (Unfunded Commitments). The Portfolio may invest up to 60% of its total assets in equity

Risk/Return Summary

JPMorgan Insurance Trust Income Builder Portfolio (continued)

securities, including common stocks, equity-linked notes (ELNs) and equity securities of real estate investment trusts (REITs). ELNs are structured as notes that are issued by counterparties, including banks, broker-dealers or their affiliates, and are designed to offer a return linked to the underlying instruments within the ELN. In addition to investments in equity securities, the Portfolio may also invest up to 25% in preferred stocks and convertible securities that have characteristics of both equity and debt securities. The Portfolio has broad discretion to use other types of equity, debt, and investments that have characteristics of both debt and equity securities as part of its principal investment strategies. These include mortgage backed, mortgage-related and asset-backed securities, including collateralized mortgage obligations and principal-only (PO) and interest-only (IO) stripped mortgage-backed securities, dollar rolls, REITs, inflation-linked securities including Treasury Inflation Protected Securities (TIPS), when-issued securities and forward commitments.

The Portfolio may invest in other mutual funds and exchange-traded funds (ETFs) within the same group of investment companies (i.e., J.P. Morgan Funds) and, for the limited purposes described below, passive ETFs that are managed by unaffiliated investment advisers (unaffiliated passive ETFs). A passive ETF is a registered investment company that seeks to track the performance of a particular market index. These indices include not only broad-based market indices but also more specific indices, including those relating to particular sectors, markets, factors, regions or industries. The Portfolio may also invest in unaffiliated closed-end registered investment companies (collectively with unaffiliated passive ETFs and J.P. Morgan Funds, underlying funds). In addition, the Portfolio may seek to gain passive exposure to one or more markets by investing directly in the securities underlying a particular index.

To the extent the Portfolio invests in underlying mutual funds, the adviser expects to select J.P. Morgan Funds without considering or canvassing the universe of unaffiliated mutual funds available, even though there may (or may not) be one or more unaffiliated mutual funds that investors might regard as more attractive for the Portfolio or that have superior returns. For passive ETFs, the adviser expects to use a J.P. Morgan ETF unless the adviser determines in its sole discretion the investment is not available. To the extent that an investment in a J.P. Morgan passive ETF is not available, only then will the adviser consider an unaffiliated passive ETF. For actively-managed underlying mutual funds and ETFs, the adviser limits its selection to J.P. Morgan Funds.

In addition to direct investments in securities, derivatives, which are instruments that have a value based on another instrument, exchange rate or index, may be used as substitutes for securities in which the Portfolio can invest. The Portfolio may use futures contracts, foreign currency transactions, options and swaps to help manage duration, sector and yield curve exposure and credit and spread volatility. The Portfolio may also use such derivatives to manage equity, country, regional

and currency exposure, to increase income or gain to the Portfolio, for hedging and for risk management. The Portfolio may hedge its non-dollar investments back to the U.S. dollar through the use of foreign currency derivatives including forward foreign currency contracts and currency futures, but may not always do so. In addition to hedging non-dollar investments, the Portfolio may use such derivatives to increase income and gain to the Portfolio and/or as part of its risk management process by establishing or adjusting exposure to particular foreign securities, markets or currencies.

The Portfolio's Main Investment Risks

The Portfolio is subject to management risk and may not achieve its objective if the adviser's expectations regarding particular instruments or markets are not met.

An investment in this Portfolio or any other fund may not provide a complete investment program. The suitability of an investment in the Portfolio should be considered based on the investment objective, strategies and risks described in this prospectus, considered in light of all of the other investments in your portfolio, as well as your risk tolerance, financial goals and time horizons. You may want to consult with a financial advisor to determine if this Portfolio is suitable for you.

The Portfolio is subject to the main risks noted below, any of which may adversely affect the Portfolio's performance and ability to meet its investment objective.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities held by the Portfolio may underperform in comparison to securities in general financial markets, a particular financial market or other asset classes, due to a number of factors, including inflation (or expectations for inflation), deflation (or expectations for deflation), interest rates, global demand for particular products or resources, market instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Portfolio's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics.

For example, the outbreak of COVID-19, a novel coronavirus disease, has negatively affected economies, markets and individual companies throughout the world, including those in which the Portfolio invests. The effects of this pandemic to public health and business and market conditions, including exchange trading suspensions and closures may continue to have a significant negative impact on the performance of the

Portfolio's investments, increase the Portfolio's volatility, exacerbate pre-existing political, social and economic risks to the Portfolio, and negatively impact broad segments of businesses and populations. The Portfolio's operations may be interrupted as a result, which may contribute to the negative impact on investment performance. In addition, governments, their regulatory agencies, or self-regulatory organizations may take actions in response to the pandemic that affect the instruments in which the Portfolio invests, or the issuers of such instruments, in ways that could have a significant negative impact on the Portfolio's investment performance. The full impact of the COVID-19 pandemic, or other future epidemics or pandemics, is currently unknown.

Equity Market Risk. The price of equity securities may rise or fall because of changes in the broad market or changes in a company's financial condition, sometimes rapidly or unpredictably. These price movements may result from factors affecting individual companies, sectors or industries selected for the Portfolio or the securities market as a whole, such as changes in economic or political conditions. When the value of the Portfolio's securities goes down, your investment in the Portfolio decreases in value.

High Yield Securities and Loan Risk. The Portfolio may invest in instruments including junk bonds, Loans and instruments that are issued by companies that are highly leveraged, less creditworthy or financially distressed. These investments are considered to be speculative and may be subject to greater risk of loss, greater sensitivity to economic changes, valuation difficulties and potential illiquidity. Such investments are subject to additional risks including subordination to other creditors, no collateral or limited rights in collateral, lack of a regular trading market, extended settlement periods, liquidity risks, prepayment risks, potentially less protections under the federal securities laws and lack of publicly available information. High yield securities and Loans that are deemed to be liquid at the time of purchase may become illiquid.

In recent years, there has been a broad trend of weaker or less restrictive covenant protections in both the Loan and high yield markets. Among other things, under such weaker or less restrictive covenants, borrowers might be able to exercise more flexibility with respect to certain activities than borrowers who are subject to stronger or more protective covenants. For example, borrowers might be able to incur more debt, including secured debt, return more capital to shareholders, remove or reduce assets that are designated as collateral securing Loans or high yield securities, increase the claims against assets that are permitted against collateral securing Loans or high yield securities or otherwise manage their business in ways that could impact creditors negatively. In addition, certain privately held borrowers might be permitted to file less frequent, less detailed or less timely financial reporting or other information, which could negatively impact the value of the Loans or high

yield securities issued by such borrowers. Each of these factors might negatively impact the Loans and high yield instruments held by the Portfolio.

No active trading market may exist for some instruments and certain investments may be subject to restrictions on resale. In addition, the settlement period for Loans is uncertain as there is no standardized settlement schedule applicable to such investments. Certain Loans may take more than seven days to settle. The inability to dispose of the Portfolio's securities and other investments in a timely fashion could result in losses to the Portfolio. Because some instruments may have a more limited secondary market, liquidity and valuation risk is more pronounced for the Portfolio than for funds that invest primarily in other types of fixed income instruments or equity securities. When Loans and other instruments are prepaid, the Portfolio may have to reinvest in instruments with a lower yield or fail to recover additional amounts (i.e., premiums) paid for these securities, resulting in an unexpected capital loss and/or a decrease in the amount of dividends and yield. Certain Loans may not be considered securities under the federal securities laws and, therefore, investments in such Loans may not be subject to certain protections under those laws. In addition, the adviser may not have access to material non-public information to which other investors may have access.

Interest Rate and Credit Risk. The Portfolio's investments in bonds and other debt securities will change in value based on changes in interest rates. If rates rise, the value of these investments generally declines. Securities with greater interest rate sensitivity and longer maturities generally are subject to greater fluctuations in value. The Portfolio may invest in variable and floating rate Loans and other variable and floating rate securities. Although these instruments are generally less sensitive to interest rate changes than other fixed rate instruments, the value of variable and floating rate Loans and other variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates. The Portfolio may face a heightened level of interest rate risk due to certain changes in monetary policy. During periods when interest rates are low or there are negative interest rates, the Portfolio's yield (and total return) also may be low or the Portfolio may be unable to maintain positive returns. The Portfolio's investments are subject to the risk that issuers or the counterparties will fail to make payments when due or default completely.

Prices of the Portfolio's investments may be adversely affected if any of the issuers or counterparties it is invested in are subject to an actual or perceived deterioration in their credit quality. Credit spreads may increase, which may reduce the market values of the Portfolio's securities. Credit spread risk is the risk that economic and market conditions or any actual or perceived credit deterioration may lead to an increase in the credit spreads (i.e., the difference in yield between two securities of similar maturity but different credit quality) and a decline in price of the issuer's securities.

Risk/Return Summary

JPMorgan Insurance Trust Income Builder Portfolio (continued)

Industry and Sector Focus Risk. At times the Portfolio may increase the relative emphasis of its investments in a particular industry or sector. The prices of securities of issuers in a particular industry or sector may be more susceptible to fluctuations due to changes in economic or business conditions, government regulations, availability of basic resources or supplies, or other events that affect that industry or sector more than securities of issuers in other industries and sectors. To the extent that the Portfolio increases the relative emphasis of its investments in a particular industry or sector, its shares' values may fluctuate in response to events affecting that industry or sector.

Foreign Securities, Emerging Markets and Currency Risk. The Portfolio may invest all of its assets in securities denominated in foreign currencies. Investments in foreign currencies, foreign issuers and foreign securities (including depositary receipts) are subject to additional risks, including political and economic risks, civil conflicts and war, greater volatility, expropriation and nationalization risks, sanctions or other measures by the United States or other governments, currency fluctuations, higher transaction costs, delayed settlement, possible foreign controls on investment and less stringent investor protection and disclosure standards of foreign markets. In certain markets where securities and other instruments are not traded "delivery versus payment," the Portfolio may not receive timely payment for securities or other instruments it has delivered or receive delivery of securities paid for and may be subject to increased risk that the counterparty will fail to make payments or delivery when due or default completely.

Events and evolving conditions in certain economies or markets may alter the risks associated with investments tied to countries or regions that historically were perceived as comparatively stable becoming riskier and more volatile. These risks are magnified in countries in "emerging markets." Emerging market countries typically have less-established market economies than developed countries and may face greater social, economic, regulatory and political uncertainties. In addition, emerging markets typically present greater illiquidity and price volatility concerns due to smaller or limited local capital markets and greater difficulty in determining market valuations of securities due to limited public information on issuers. Certain emerging market countries may be subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping and therefore, material information related to an investment may not be available or reliable. In addition, the Portfolio is limited in its ability to exercise its legal rights or enforce a counterparty's legal obligations in certain jurisdictions outside of the United States, in particular, in emerging markets countries. While the Portfolio may engage in various strategies to hedge against currency risk, it is not required to do so.

Geographic Focus Risk. The Portfolio may focus its investments in one or more regions or small groups of countries. As a result, the Portfolio's performance may be subject to greater volatility than a more geographically diversified fund.

European Market Risk. The Portfolio's performance may be affected by political, social and economic conditions in Europe, such as growth of the economic output (the gross national product), the rate of inflation, the rate at which capital is reinvested into European economies, the success of governmental actions to reduce budget deficits, the resource self-sufficiency of European countries and interest and monetary exchange rates between European countries. European financial markets may experience volatility due to concerns about high government debt levels, credit rating downgrades, rising unemployment, the future of the euro as a common currency, possible restructuring of government debt and other government measures responding to those concerns, and fiscal and monetary controls imposed on member countries of the European Union. The risk of investing in Europe may be heightened due to steps taken by the United Kingdom to exit the European Union. On January 31, 2020, the United Kingdom officially withdrew from the European Union. On December 30, 2020, the European Union and the United Kingdom signed the EU-UK Trade and Cooperation Agreement ("TCA"), an agreement on the terms governing certain aspects of the European Union's and the United Kingdom's relationship many of which are still to be determined, including those related to financial services. Notwithstanding the TCA, significant uncertainty remains in the market regarding the ramifications of the United Kingdom's withdrawal from the European Union. The impact on the United Kingdom and European economies and the broader global economy could be significant, resulting in increased volatility and illiquidity, currency fluctuations, impacts on arrangements for trading and on other existing cross-border cooperation arrangements (whether economic, tax, fiscal, legal, regulatory or otherwise) and in potentially lower growth for companies in the United Kingdom, Europe and globally, which could have an adverse effect on the value of the Portfolio's investments. In addition, if one or more other countries were to exit the European Union or abandon the use of the euro as a currency, the value of investments tied to those countries or the euro could decline significantly and unpredictably.

The Portfolio's performance may also be impacted by civil conflicts and more, including the recent invasion of Ukraine by Russia.

Asset-Backed, Mortgage-Related and Mortgage-Backed Securities Risk. The Portfolio may invest in asset-backed, mortgage-related and mortgage-backed securities including so-called "sub-prime" mortgages that are subject to certain other risks including prepayment and call risks. When mortgages and other obligations are prepaid and when securities are called, the Portfolio may have to reinvest in securities with a lower yield or fail to recover additional amounts (i.e., premiums) paid for

securities with higher interest rates, resulting in an unexpected capital loss and/or a decrease in the amount of dividends and yield. In periods of either rising or declining interest rates, the Portfolio may be subject to extension risk, and may receive principal later than expected. As a result, in periods of rising interest rates, the Portfolio may exhibit additional volatility. During periods of difficult or frozen credit markets, significant changes in interest rates, or deteriorating economic conditions, such securities may decline in value, face valuation difficulties, become more volatile and/or become illiquid. Additionally, asset-backed, mortgage-related and mortgage-backed securities are subject to risks associated with their structure and the nature of the assets underlying the securities and the servicing of those assets. Certain asset-backed, mortgage-related and mortgage-backed securities may face valuation difficulties and may be less liquid than other types of asset-backed, mortgage-related and mortgage-backed securities, or debt securities. Collateralized mortgage obligations (CMOs) and stripped mortgage backed securities, including those structured as IOs and POs, are more volatile and may be more sensitive to the rate of prepayments than other mortgage-related securities.

Convertible Securities Risk. The value of convertible securities tends to decline as interest rates rise and, because of the conversion feature, tends to vary with fluctuations in the market value of the underlying securities. Convertible securities generally rank senior to common stock in a corporation's capital structure but are usually subordinated to comparable non-convertible securities. Convertible securities generally do not participate directly in any dividend increases or decreases of the underlying securities, although the market prices of convertible securities may be affected by any dividend changes or other changes in the underlying securities.

Preferred Stock Risk. Preferred stock generally has a preference as to dividends and liquidation over an issuer's common stock but ranks junior to debt securities in an issuer's capital structure. Unlike interest payments on debt securities, preferred stock dividends are payable only if declared by the issuer's board of directors. Preferred stock also may be subject to optional or mandatory redemption provisions.

Real Estate Securities Risk. The Portfolio's investments in real estate securities, including REITs, are subject to the same risks as direct investments in real estate and mortgages, and their value will depend on the value of the underlying real estate interests. These risks include default, prepayments, changes in value resulting from changes in interest rates and demand for real and rental property, decreases in real estate values, overbuilding, increased competition and other risks related to local or general economic conditions, increases in operating costs and property taxes, changes in zoning laws, casualty or condemnation losses, possible environmental liabilities, regulatory limitations on rent, possible lack of availability of mortgage financing, market saturation, fluctuations in rental income and the value of underlying properties and extended vacancies of properties, and the management skill and credit-worthiness of

REIT issuers. The Portfolio will indirectly bear its proportionate share of expenses, including management fees, paid by each REIT in which it invests in addition to the expenses of the Portfolio.

Derivatives Risk. Derivatives, including futures contracts, foreign currency transactions, options, swaps, forward foreign currency contracts, currency futures and participation notes, may be riskier than other types of investments and may increase the volatility of the Portfolio. Derivatives may be sensitive to changes in economic and market conditions and may create leverage, which could result in losses that significantly exceed the Portfolio's original investment. Certain derivatives also expose the Portfolio to counterparty risk, which is the risk that the derivative counterparty will not fulfill its contractual obligations (and includes credit risk associated with the counterparty). Certain derivatives are synthetic instruments that attempt to replicate the performance of certain reference assets. With regard to such derivatives, the Portfolio does not have a claim on the reference assets and is subject to enhanced counterparty risk. Derivatives may not perform as expected, so the Portfolio may not realize the intended benefits. When used for hedging, the change in value of a derivative may not correlate as expected with the currency, security or other risk being hedged. In addition, given their complexity, derivatives expose the Portfolio to risks of mispricing or improper valuation. Certain of the Portfolio's transactions in foreign currency derivatives and other derivatives could also affect the amount, timing and character of distributions to shareholders which may result in the Portfolio realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact the Portfolio's after-tax returns. In addition, the Portfolio may use derivatives for non-hedging purposes, which increases the Portfolio's potential for loss.

Government Securities Risk. The Portfolio invests in securities issued or guaranteed by the U.S. government or its agencies and instrumentalities (such as securities issued by the Government National Mortgage Association (Ginnie Mae), the Federal National Mortgage Association (Fannie Mae), or the Federal Home Loan Mortgage Corporation (Freddie Mac)). U.S. government securities are subject to market risk, interest rate risk and credit risk. Securities, such as those issued or guaranteed by Ginnie Mae or the U.S. Treasury, that are backed by the full faith and credit of the United States are guaranteed only as to the timely payment of interest and principal when held to maturity and the market prices for such securities will fluctuate. Notwithstanding these securities are backed by the full faith and credit of the United States, circumstances could arise that would prevent the payment of interest or principal. This would result in losses to the Portfolio. Securities issued or guaranteed by U.S. government-related organizations, such as Fannie Mae and Freddie Mac, are not backed by the full faith and credit of the U.S. government and no assurance can be given that the

Risk/Return Summary

JPMorgan Insurance Trust Income Builder Portfolio (continued)

U.S. government will provide financial support. Therefore, U.S. government-related organizations may not have the funds to meet their payment obligations in the future.

ETF and Other Investment Company Risk. Shareholders bear both their proportionate share of the Portfolio's expenses and similar expenses of an ETF or other investment company. The price and movement of an index-based ETF may not track the underlying index and may result in a loss. ETFs may trade at a price below their net asset value (also known as a discount). The Portfolio may invest in J.P. Morgan Funds. Because the Portfolio's Adviser or its affiliates provide services to and receive fees from J.P. Morgan Funds, the Portfolio's investments in such funds benefit the Adviser and/or its affiliates. In addition, the Portfolio may hold a significant percentage of the shares of a J.P. Morgan Fund. In addition, the adviser's authority to allocate investments among J.P. Morgan Funds could cause the Portfolio to incur higher fees and will cause the adviser and/or its affiliates to receive greater compensation, increase assets under management or support particular investment strategies or J.P. Morgan Funds.

Inflation-Linked Securities Risk. Inflation-linked debt securities are subject to the effects of changes in market interest rates caused by factors other than inflation (real interest rates). In general, the price of an inflation-linked security tends to decline when real interest rates increase. Unlike conventional bonds, the principal and interest payments of inflation-linked securities such as TIPS are adjusted periodically to a specified rate of inflation (e.g., Non-Seasonally Adjusted Consumer Price Index for all Urban Consumers (CPI-U)). There can be no assurance that the inflation index used will accurately measure the real rate of inflation. These securities may lose value in the event that the actual rate of inflation is different than the rate of the inflation index.

Transactions Risk. The Portfolio could experience a loss and its liquidity may be negatively impacted when selling securities to meet redemption requests. The risk of loss increases if the redemption requests are unusually large or frequent or occur in times of overall market turmoil or declining prices. Similarly, large purchases of Portfolio shares may adversely affect the Portfolio's performance to the extent that the Portfolio is delayed in investing new cash and is required to maintain a larger cash position than it ordinarily would.

LIBOR Discontinuance or Unavailability Risk. The London Interbank Offering Rate ("LIBOR") is intended to represent the rate at which contributing banks may obtain short-term borrowings from each other in the London interbank market. On March 5, 2021, the U.K. Financial Conduct Authority ("FCA") publicly announced that (i) immediately after December 31, 2021, publication of the 1-week and 2-month U.S. Dollar LIBOR settings will permanently cease; (ii) immediately after June 30, 2023, publication of the overnight and 12-month U.S. Dollar LIBOR settings will permanently cease; and (iii) immediately after June 30, 2023, the 1-month, 3-month and 6-month U.S. Dollar LIBOR settings will cease to be provided or,

subject to the FCA's consideration of the case, be provided on a synthetic basis and no longer be representative of the underlying market and economic reality they are intended to measure and that representativeness will not be restored. There is no assurance that the dates announced by the FCA will not change or that the administrator of LIBOR and/or regulators will not take further action that could impact the availability, composition or characteristics of LIBOR or the currencies and/or tenors for which LIBOR is published, and we recommend that you consult your advisors to stay informed of any such developments. In addition, certain regulated entities ceased entering into most new LIBOR contracts in connection with regulatory guidance or prohibitions. Public and private sector industry initiatives are currently underway to implement new or alternative reference rates to be used in place of LIBOR. There is no assurance that any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR prior to its discontinuance, unavailability or replacement, all of which may affect the value, volatility, liquidity or return on certain of a Portfolio's loans, notes, derivatives and other instruments or investments comprising some or all of a Portfolio's investments and result in costs incurred in connection with changing reference rates used for positions, closing out positions and entering into new trades. Certain of the Portfolio's investments may transition from LIBOR prior to the dates announced by the FCA. The transition from LIBOR to alternative reference rates may result in operational issues for the Portfolio or its investments. No assurances can be given as to the impact of the LIBOR transition (and the timing of any such impact) on the Portfolio and its investments.

Equity-Linked Notes Risk. Investing in ELNs may be more costly to the Portfolio than if the Portfolio had invested in the underlying instruments directly. Investments in ELNs often have risks similar to the underlying instruments, which include market risk. In addition, since ELNs are in note form, ELNs are subject to certain debt securities risks, such as credit or counterparty risk. Should the prices of the underlying instruments move in an unexpected manner, the Portfolio may not achieve the anticipated benefits of an investment in an ELN, and may realize losses, which could be significant and could include the Portfolio's entire principal investment. Investments in ELNs are also subject to liquidity risk, which may make ELNs difficult to sell and value. A lack of liquidity may also cause the value of the ELN to decline. In addition, ELNs may exhibit price behavior that does not correlate with the underlying securities. The Portfolio's ELN investments are subject to the risk that issuers and/or counterparties will fail to make payments when due or default completely. Prices of the Portfolio's ELN investments may be adversely affected if any of the issuers or counterparties it is invested in are subject to an actual or perceived deterioration in their credit quality.

Investments in the Portfolio are not deposits or obligations of, or guaranteed or endorsed by, any bank and are not insured or guaranteed by the FDIC, the Federal Reserve Board or any other government agency.
 You could lose money investing in the Portfolio.

The Portfolio's Past Performance

This section provides some indication of the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio's Class 2 Shares has varied from year to year over the past seven calendar years. The table shows the average annual total returns for the past one year, five years and life of the Portfolio. The table compares that performance to the MSCI World Index (net of foreign withholding taxes), the Bloomberg U.S. Aggregate Index and a customized blend of unmanaged indexes weighted as follows: 60% MSCI World Index (net of foreign withholding taxes) and 40% Bloomberg U.S. Aggregate Index. Past performance is not necessarily an indication of how the Portfolio will perform in the future. *Updated performance information is available by calling 1-800-480-4111.*

The performance figures shown do not reflect charges imposed by variable insurance contracts or Eligible Plans through which the Portfolio is offered. The Portfolio's performance will be lower when any such charges are deducted.

Best Quarter 2nd quarter, 2020 **9.62%**

Purchase and Sale of Portfolio Shares

The Portfolio sells its shares at net asset value on any business day directly to the separate accounts of various insurance companies issuing variable annuity contracts and variable life insurance policies (variable insurance contracts) and certain qualified retirement plans. You may invest indirectly in the Portfolio through your purchase of a variable insurance contract or through a qualified retirement plan. Any minimum or subsequent investment requirements and redemption procedures are governed by the applicable separate account or retirement plan through which you invest.

Tax Information

Under current law, owners of variable insurance contracts and qualified retirement plan participants that have invested in the Portfolio are not subject to federal income tax on Portfolio

Risk/Return Summary

JPMorgan Insurance Trust Income Builder Portfolio (continued)

earnings and distributions on gains realized upon the sale or redemption of Portfolio shares until such amounts are withdrawn from the retirement plan or variable contract.

Payments to Insurance Companies and to Broker-Dealers and Other Financial Intermediaries

Portfolio shares are available only through an insurance company's variable insurance contracts or an employer or other retirement plan (Retirement Products). The Portfolio or its related companies may make payments to an insurance company (and/or its related companies) for distribution and/or related services. Such insurance companies (or their related companies) may pay broker-dealers or other financial intermediaries that sell the variable insurance contracts for the

sale of Portfolio shares and/or related services. These payments to insurance companies may be a factor that the insurance company considers in including the Portfolio as an underlying investment in a variable insurance contract. The prospectus or other disclosures relating to a variable insurance contract may contain additional information about these payments. When received by a broker-dealer or other financial intermediary from an insurance company (or its related companies) or in connection with Retirement Products, such payments may create a conflict of interest by influencing the financial intermediary to recommend the Portfolio over another investment. Ask your financial intermediary or visit its website for more information.

More About the Portfolio

ADDITIONAL INFORMATION ABOUT THE PORTFOLIO'S INVESTMENT STRATEGIES

The Portfolio primarily invests in a broad range of income-producing securities, including debt and equity securities in the U.S. and other markets throughout the world, both developed and emerging. The Portfolio may invest in a wide variety of asset classes from issuers throughout the world (including emerging market countries) to achieve its core objective of maximizing income while also providing an opportunity for capital appreciation. There is no limit on the number of countries in which the Portfolio may invest, and the Portfolio may focus its investments in a single country or a small group of countries.

The Portfolio may invest up to 100% of its total assets in debt securities and other types of investments that are rated below investment grade meaning that such securities will carry a rating below Baa3 by Moody's Investor Service, Inc. (Moody's), BBB- by Standard & Poor's Corporation (S&P), or BBB- by Fitch Ratings (Fitch), or the equivalent by another national rating organization, or securities that are unrated. With respect to below investment grade debt securities, the Portfolio currently expects to invest no more than 70% of its total assets in such securities.

The Portfolio may invest up to 35% of its total assets in Loans and Unfunded Commitments. Loans will typically consist of senior floating rate loans (Senior Loans), but may also include secured and unsecured loans, second lien loans or more junior and bridge loans (Junior Loans). Loans may be issued by obligors in the U.S. or in foreign or emerging markets. When the Portfolio acquires a loan assignment, the Portfolio typically will have a direct contractual relationship with the obligor; provided, however, that the Portfolio's rights may be more limited than the lender from which it acquired the assignment and the Portfolio may be able to enforce its rights only through an administrative agent. The Portfolio attempts to maximize its dividend yield by investing in common stock of corporations that regularly pay dividends, as well as stocks with favorable long-term fundamental characteristics. The Portfolio may invest up to 60% of its total assets in equity securities, including common stocks, ELNs and equity securities of REITs. ELNs are structured as notes that are issued by counterparties, including banks, broker-dealers or their affiliates, and are designed to offer a return linked to the underlying instruments within the ELN. In addition to investments in equity securities, the Portfolio may also invest up to 25% in preferred stocks and convertible securities that have characteristics of both equity and debt securities. The Portfolio has broad discretion to use other types of equity, debt, and investments that have characteristics of both debt and equity securities as part of its principal investment strategies. Because yield is the main consideration in selecting securities, the Portfolio may purchase stocks of companies that are out of favor in the financial community and, therefore, are selling below what JPMIM believes to be their long-term investment value. The Portfolio may also invest in convertible bonds, warrants, participation notes (P-Notes), preferred stocks and rights.

The Portfolio may invest in common stocks and, to a lesser extent, debt securities of REITs and other real estate companies in both developed and emerging markets. REITs are pooled investment vehicles which invest primarily in income-producing real estate or loans related to real estate. The Portfolio may also invest in other types of equity securities of real estate companies including rights, warrants, convertible securities and preferred stocks.

In addition to direct investments in securities, derivatives, which are instruments that have a value based on another instrument, exchange rate or index, may be used as substitutes for securities in which the Portfolio can invest. The Portfolio may use futures contracts, foreign currency transactions, options and swaps to help manage duration, sector and yield curve exposure and credit and spread volatility. The Portfolio may also use such derivatives to manage equity, country, regional and currency exposure. The Portfolio may hedge its non-dollar investments back to the U.S. dollar through the use of foreign currency derivatives including forward foreign currency contracts and currency futures, but may not always do so. In addition to hedging non-dollar investments, the Portfolio may use derivatives to increase income and gain to the Portfolio and/or as part of its risk management process by establishing or adjusting exposure to particular foreign securities, markets or currencies. Under certain market conditions, the Portfolio's use of derivatives could be significant.

The Portfolio may invest in asset-backed securities. The Portfolio may also invest in mortgage-backed and mortgage-related securities issued by governmental entities, certain issuers identified with the U.S. government and private issuers. These may include investments in collateralized mortgage obligations and principal-only and interest-only stripped mortgage-backed securities.

The Portfolio may enter into "dollar rolls," in which the Portfolio sells mortgage-backed securities and at the same time contracts to buy back very similar securities on a future date.

The Portfolio also may invest in inflation-linked securities of varying maturities issued by the U.S. government, its agencies and instrumentalities, such as TIPS, as well as inflation-linked debt securities issued by other entities such as corporations, foreign governments and other foreign issuers. The Portfolio also may purchase when-issued securities and forward commitments, which are contracts to purchase securities at a fixed price for delivery at a future date.

More About the Portfolio (continued)

The Portfolio may invest in underlying funds. To the extent the Portfolio invests in underlying mutual funds, the adviser expects to select J.P. Morgan Funds without considering or canvassing the universe of unaffiliated mutual funds available, even though there may (or may not) be one or more unaffiliated mutual funds that investors might regard as more attractive for the Portfolio or that have superior returns. For passive ETFs, the adviser expects to use a J.P. Morgan ETF unless the adviser determines in its sole discretion the investment is not available. To the extent that an investment in a J.P. Morgan passive ETF is not available, only then will the adviser consider an unaffiliated passive ETF. For actively-managed underlying mutual funds and ETFs, the adviser limits its selection to J.P. Morgan Funds.

The Portfolio may invest in exchange-traded funds (ETFs) in order to gain exposure to particular markets including foreign and emerging markets or asset classes. ETFs, which are pooled investment vehicles whose ownership interests are purchased and sold on a securities exchange, may be passively or actively managed. Passively managed ETFs generally seek to track the performance of a particular market index, including broad-based market indexes, as well as indexes relating to particular sectors, markets, regions or industries. Actively managed ETFs do not seek to track the performance of a particular market index. Ordinarily, the Portfolio must limit its investments in a single ETF to 3% of the ETFs total assets, 5% of the Portfolio's total assets and in all ETFs and other investment companies to 10% of its total assets. The Securities and Exchange Commission adopted an exemptive rule that allows any fund to disregard these 3%, 5% and 10% limitations, subject to certain conditions. ETFs that are not structured as investment companies as defined in the Investment Company Act of 1940 are not subject to these percentage limitations. The price movement of an index-based ETF may not track the underlying index and may result in a loss. In addition, ETFs may trade at a price above (premium) or below (discount) their net asset value, especially during periods of significant market volatility or stress, causing investors to pay significantly more or less than the value of the ETF's underlying portfolio.

Securities Lending. The Portfolio may engage in securities lending to increase its income. Securities lending involves the lending of securities owned by the Portfolio to financial institutions such as certain broker-dealers in exchange for cash collateral. The Portfolio will invest cash collateral in one or more money market funds advised by the adviser or its affiliates. The adviser or its affiliates will receive additional compensation from the affiliated money market funds on the Portfolio's investment in such money market funds. During the term of the loans, the Portfolio is entitled to receive amounts equivalent to distributions paid on the loaned securities as well as the return on the cash collateral investments. Upon termination of the loans, the Portfolio is required to return the cash collateral to the borrower plus any agreed upon rebate. Cash collateral investments will be subject to market depreciation or appreciation, and the Portfolio will be responsible for any loss that might result from its investment of cash collateral. If the adviser determines to make securities loans, the value of the securities loaned may not exceed 33⅓% of the value of total assets of the Portfolio. Loan collateral (including any investment of that collateral) is not subject to the percentage limitations regarding the Portfolio's investments described elsewhere in this Prospectus.

Investment Process: Drawing on the resources of multiple specialist teams within JPMIM, the portfolio managers establish the strategic and tactical allocation for the Portfolio and make the day-to-day decisions concerning strategies, sectors, and overall portfolio construction based on income generation, risk/return analyses and relative value considerations. As a part of this analysis, the adviser seeks to assess the risks presented by certain environmental, social and governance factors (ESG). In connection with this analysis, the adviser will assess how ESG risks are considered within an active underlying fund's/manager's investment process and how the active underlying fund/manager defines and mitigates material ESG risks. Although these particular risks are considered, underlying funds and securities of issuers presenting such risks may be purchased and retained by the Portfolio.

As attractive investments across asset classes and strategies arise, the portfolio managers attempt to capture these opportunities and have wide latitude to allocate the Portfolio's assets among strategies and asset classes. The lead portfolio managers leverage the resources and insights of the research analysts and portfolio managers who serve on specialist asset class teams. Such specialist teams select individual securities within the portfolio construction mandates established by the portfolio managers. The Portfolio may utilize these instruments and investment strategies to a greater or lesser degree.

If a strategy is a main investment strategy for the Portfolio, it is summarized above. The frequency with which the Portfolio buys and sells securities will vary from year to year, depending on market conditions.

NON-FUNDAMENTAL INVESTMENT OBJECTIVES

An investment objective is fundamental if it cannot be changed without the consent of a majority of the outstanding shares of the Portfolio. The investment objective for the Portfolio is non-fundamental and may be changed without the consent of a majority of the outstanding shares of that Portfolio.

Please note that the Portfolio also may use strategies that are not described herein, but which are described in the Statement of Additional Information.

INVESTMENT RISKS

There can be no assurance that the Portfolio will achieve its investment objective.

The main risks associated with investing in the Portfolio are summarized in the Risk/Return Summary at the front of this prospectus. In addition to the Portfolio's main risks, the Portfolio may be subject to additional risks in connection with investments and strategies used by the Portfolio from time to time. The table below identifies the main risks and some of the additional risks of the Portfolio. The Portfolio may also be subject to additional risks that are not described herein but which are described in the Statement of Additional Information.

The Portfolio also may use other non-principal strategies that are not described herein, but which are described in the Statement of Additional Information.

An investment in the Portfolio or any other fund may not provide a complete investment program. The suitability of an investment in the Portfolio should be considered based on the investment objective, strategies and risks described in this Prospectus, considered in light of all of the other investments in your portfolio, as well as your risk tolerance, financial goals and time horizons. You may want to consult with a financial advisor to determine if the Portfolio is suitable for you.

The Portfolio is subject to the risks noted below, any of which may adversely affect the Portfolio's net asset value (NAV), performance and ability to meet its investment objective.

	Income Builder Portfolio
Volcker Rule Risk	○

○ Additional Risks

Equity Market Risk. The price of equity securities may rise or fall because of changes in the broad market or changes in a company's financial condition, sometimes rapidly or unpredictably. These price movements may result from factors affecting individual companies, sectors or industries selected for the Portfolio or the securities market as a whole, such as changes in economic or political conditions. Equity securities are subject to "stock market risk" meaning that stock prices in general (or in particular, the prices of the types of securities in which the Portfolio invests) may decline over short or extended periods of time. When the value of the Portfolio's securities goes down, your investment in the Portfolio decreases in value.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Portfolio's portfolio may underperform in comparison to securities in general financial markets, a particular financial market or other asset classes, due to a number of factors, including inflation (or expectations for inflation), deflation (or expectations for deflation), interest rates, global demand for particular products or resources, market instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Portfolio's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics.

For example, the outbreak of COVID-19, a novel coronavirus disease, has negatively affected economies, markets and individual companies throughout the world, including those in which the Portfolio invests. The effects of this pandemic to public health and business and market conditions, including exchange trading suspensions and closures may continue to have a significant negative impact on the performance of the Portfolio's investments, increase the Portfolio's volatility, exacerbate pre-existing political, social and economic risks to the Portfolio, and negatively impact broad segments of businesses and populations. The Portfolio's operations may be interrupted as a result, which may contribute to the negative impact on investment performance. In addition, governments, their regulatory agencies, or self-regulatory organizations may take actions in response to the pandemic that affect the instruments in which the Portfolio invests, or the issuers of such instruments, in ways that could have a significant negative impact on the Portfolio's investment performance. The full impact of the COVID-19 pandemic, or other future epidemics or pandemics, is currently unknown.

Real Estate Securities Risk. The value of real estate securities in general, and REITs in particular, are subject to the same risks as direct investments in real estate and mortgages which include, but are not limited to, sensitivity to changes in real estate values and property taxes, interest rate risk, tax and regulatory risk, fluctuations in rent schedules and operating expenses, adverse changes in local, regional or general economic conditions, deterioration of the real estate market and the financial circumstances of tenants and sellers, unfavorable changes in zoning, building, environmental and other laws, the need for unanticipated renovations, unexpected increases in the cost of energy and environmental factors. Furthermore, a REIT could fail to qualify for tax free pass-through of its income under the Internal Revenue Code or fail to maintain its exemption from registration under the 1940 Act, which could produce adverse economic consequences for the REIT and its investors, including the Portfolio.

The underlying mortgage loans may be subject to the risks of default or of prepayments that occur earlier or later than expected, and such loans may also include so-called "sub-prime" mortgages. The value of REITs will also rise and fall in response to the management skill and creditworthiness of the issuer. In particular, the value of these securities may decline when interest rates rise and will also be affected by the real estate market and by the management of the underlying properties. REITs may be more volatile and/or more illiquid than other types of equity securities. The Portfolio will indirectly bear its proportionate share of expenses, including management fees, paid by each REIT in which it invests in addition to the expenses of the Portfolio.

In addition, certain of the companies in which the Portfolio intends to invest may have developed or commenced development on properties and may develop additional properties in the future. Real estate development involves significant risks in addition to those involved in the ownership and operation of established properties, including the risks that financing, if needed, may not be available on favorable terms for development projects, that construction may not be completed on schedule (resulting in increased debt service expense and construction costs), that estimates of the costs of construction may prove to be inaccurate and that properties may not be leased, rented or operated on profitable terms and therefore will fail to perform in accordance with expectations. As a result, the value of the Portfolio's investment may decrease in value. Real estate securities have limited diversification and are, therefore, subject to risks inherent in operating and financing a limited number of projects. Real estate securities are also subject to heavy cash flow dependency and defaults by borrowers or tenants.

Industry and Sector Focus Risk. At times, the Portfolio may increase the relative emphasis of its investments in a particular industry or sector. The prices of securities of issuers in a particular industry or sector may be more susceptible to fluctuations due to changes in economic or business conditions, government regulations, availability of basic resources or supplies, or other events that affect that industry or sector more than securities of issuers in other industries and sectors. To the extent that the Portfolio increases the relative emphasis of its investments in a particular industry or sector, its shares' values may fluctuate in response to events affecting that industry or sector.

Foreign Securities and Emerging Markets Risk. To the extent the Portfolio invests in foreign securities (including depositary receipts), these investments are subject to special risks in addition to those of U.S. investments. These risks include political and economic risks, civil conflicts and war, greater volatility, sanctions or other measures by the United States or other governments, currency fluctuations, expropriation and nationalization risks, higher transaction costs, delayed settlement, possible foreign controls on investment, and less stringent investor protection and disclosure standards of foreign markets. The securities markets of many foreign countries are relatively small, with a limited number of companies representing a small number of industries. If foreign securities are denominated and traded in a foreign currency, the value of the Portfolio's foreign holdings can be affected by currency exchange rates and exchange control regulations. In certain markets where securities and other instruments are not traded "delivery versus payment," the Portfolio may not receive timely payment for securities or other instruments it has delivered or receive delivery of securities paid for and may be subject to increased risk that the counterparty will fail to make payments or delivery when due or default completely.

Securities registration, custody, and settlement may in some instances be subject to delays and legal and administrative uncertainties. Foreign investment in the securities markets of certain foreign countries is restricted or controlled to varying degrees. These restrictions or controls may at times limit or preclude investment in certain securities and may increase the costs and expenses of a Portfolio. In addition, the repatriation of investment income, capital or the proceeds of sales of securities from certain of the countries is controlled under regulations, including in some cases the need for certain advance government notification or authority, and if a deterioration occurs in a country's balance of payments, the country could impose temporary restrictions on foreign capital remittances. A Portfolio also could be adversely affected by delays in, or a refusal to grant, any required governmental approval for repatriation, as well as by the application to it of other restrictions on investment.

Events and evolving conditions in certain economies or markets may alter the risks associated with investments tied to countries or regions that historically were perceived as comparatively stable becoming riskier and more volatile. The risks associated with foreign securities are magnified in countries in "emerging markets." These countries may have relatively unstable governments and less-established market economies than developed countries. Emerging markets may face greater social, economic, regulatory and political uncertainties. These risks make emerging market securities more volatile and less liquid than securities issued in more developed countries and you may sustain sudden, and sometimes substantial, fluctuations in the value of your investments. Certain emerging market countries may be subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping and therefore, material information related to an investment may not be available or reliable. In addition, a Portfolio is limited in its ability to exercise its legal rights or enforce a counterparty's legal obligations in certain jurisdictions outside of the United States, in particular, in emerging markets countries. In addition, due to jurisdictional limitations, U.S. regulators may be limited in their ability to enforce regulatory or legal obligations in emerging market countries. The Portfolio's investments in foreign and emerging market securities may also be subject to foreign withholding taxes and/or other taxes, which would decrease the Portfolio's yield on these securities.

Geographic Focus Risk. In addition to the more general Foreign Securities and Emerging Markets Risk above, the Portfolio may focus its investments in one or more foreign regions or small group of companies. As a result, the Portfolio's performance may be subject to greater volatility than a more geographically diversified fund and may be subject to the risks in the following regional areas.

Derivatives Risk. The Portfolio may use **derivatives** in connection with its investment strategies. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in losses that significantly exceed the Portfolio's original investment. Derivatives are subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives may not be successful, resulting in losses to the Portfolio, and the cost of such strategies may reduce the Portfolio's returns. Certain derivatives also expose the Portfolio to counterparty risk (the risk that the derivative counterparty will not fulfill its contractual obligations), and includes the credit risk of the derivative counterparty. In addition, the Portfolio may use derivatives for non-hedging purposes, which increases the Portfolio's potential for loss. Certain derivatives are synthetic instruments that attempt to replicate the performance of certain reference assets. With regard to such derivatives, the Portfolio does not have a claim on the reference assets and is subject to enhanced counterparty risk.

More About the Portfolio (continued)

Investing in derivatives will result in a form of leverage. Leverage involves special risks. The Portfolio may be more volatile than if the Portfolio had not been leveraged because leverage tends to exaggerate any effect of the increase or decrease in the value of the Portfolio's securities. Registered investment companies are limited in their ability to engage in derivative transactions and are required to identify and earmark assets to provide asset coverage for derivative transactions.

The possible lack of a liquid secondary market for derivatives and the resulting inability of the Portfolio to sell or otherwise close a derivatives position could expose the Portfolio to losses and could make derivatives more difficult for the Portfolio to value accurately.

The Portfolio's transactions in futures contracts, swaps and other derivatives will be subject to special tax rules, the effect of which may be to accelerate income to the Portfolio, defer losses to the Portfolio and cause adjustments in the holding periods of the Portfolio's securities. These rules could therefore affect the amount and timing of distributions to shareholders.

WHAT IS A DERIVATIVE?

Derivatives are securities or contracts (for example futures and options) that derive their value from the performance of underlying assets or securities.

Convertible Securities Risk. A convertible security generally entitles the holder to receive interest paid or accrued on debt securities or the dividend paid on preferred stock until the convertible security matures or is redeemed, converted or exchanged. Before conversion, convertible securities generally have characteristics similar to both debt and equity securities. The value of convertible securities tends to decline as interest rates rise and, because of the conversion feature, tends to vary with fluctuations in the market value of the underlying securities. Convertible securities are usually subordinated to comparable nonconvertible securities. Convertible securities ordinarily provide a stream of income with generally higher yields than those of common stock of the same or similar issuers. Convertible securities generally rank senior to common stock in a corporation's capital structure but are usually subordinated to comparable nonconvertible securities. Convertible securities generally do not participate directly in any dividend increases or decreases of the underlying securities, although the market prices of convertible securities may be affected by any dividend changes or other changes in the underlying securities.

Interest Rate Risk. The Portfolio invests in debt securities that increase or decrease in value based on changes in interest rates. If rates increase, the value of these investments generally declines. On the other hand, if rates fall, the value of these investments generally increases. Your investment will decline in value if the value of these investments decreases. Securities with greater interest rate sensitivity and longer maturities generally are subject to greater fluctuations in value. The Portfolio may invest in variable and floating rate Loans and other variable and floating rate securities. Although these instruments are generally less sensitive to interest rate changes than fixed rate instruments, the value of variable and floating rate Loans and other securities may decline if their interest rates do not rise as quickly or as much as general interest rates. Many factors can cause interest rates to rise. Some examples include central bank monetary policy, rising inflation rates and general economic conditions. The Portfolio may face a heightened level of interest rate risk due to certain changes or uncertainty in monetary policy.

Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods when interest rates are low or there are negative interest rates, a Portfolio's yield (and total return) also may be low or the Portfolio may be unable to maintain positive returns.

Debt market conditions are highly unpredictable and some parts of the market are subject to dislocations. In response to the outbreak of COVID-19, as with other serious economic disruptions, governmental authorities and regulators are enacting significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are unexpectedly or suddenly reversed or are ineffective in achieving their desired outcomes. In light of these actions and current conditions, interest rates and bond yields in the U.S. and many other countries are at or near historic lows, and in some cases, such rates and yields are negative. The current very low or negative interest rates subject the Portfolio to the risks described above. In addition, the current environment is exposing debt markets to significant volatility and reduced liquidity for Portfolio investments.

Credit Risk. There is a risk that issuers and/or a counterparty to a security, contract, repurchase agreement or other investment will not make payments on securities, repurchase agreements or other investments held by the Portfolio. The risk of defaults across issuers and/or counterparties increases in adverse market and economic conditions, including the conditions resulting from the COVID-19 pandemic. Such defaults could result in losses to the Portfolio. In addition, the credit quality of securities held by the Portfolio may be lowered if an issuer's or counterparty's financial condition changes. Lower credit quality may lead to greater volatility in the price of a

security and in shares of the Portfolio. Lower credit quality also may affect liquidity and make it difficult for the Portfolio to sell the security. The Portfolio may invest in securities that are rated in the lowest investment grade category. Such securities are considered to have speculative characteristics similar to high yield securities, and issuers or counterparties of such securities are more vulnerable to changes in economic conditions than issuers or counterparties of higher grade securities. Prices of the Portfolio's investments may be adversely affected if any of the issuers or counterparties it is invested in are subject to an actual or perceived deterioration in their credit quality. Credit spreads may increase, which may reduce the market values of the Portfolio's securities. Credit spread risk is the risk that economic and market conditions or any actual or perceived credit deterioration may lead to an increase in the credit spreads (i.e., the difference in yield between two securities of similar maturity but different credit quality) and a decline in price of the issuer's securities.

Mortgage-Related and Other Asset-Backed Securities Risk. The Portfolio may invest in both residential or commercial mortgage-related and asset-backed securities including so-called "sub-prime" mortgages that are subject to certain other risks including prepayment and call risks. The value of mortgage-backed and asset-backed securities will be influenced by the factors affecting the residential and commercial property market and the assets underlying such securities. As a result, during periods of declining asset value, difficult or frozen credit markets, swings in interest rates, or deteriorating economic conditions, mortgage-related and asset-backed securities may decline in value, face valuation difficulties, become more volatile and/or become illiquid. Additionally, during such periods and also under normal conditions, these securities are also subject to prepayment and call risk. Gains and losses associated with prepayments will increase or decrease the Portfolio's yield and the income available for distribution by the Portfolio. When mortgages and other obligations are prepaid and when securities are called, the Portfolio may have to reinvest in securities with a lower yield or fail to recover additional amounts (i.e., premiums) paid for securities with higher interest rates, resulting in an unexpected capital loss and/or a decrease in the amount of dividends and yield. In periods of either rising or declining interest rates, the Portfolio may be subject to extension risk, and may receive principal later than expected. As a result, in periods of rising interest rates, the Portfolio may exhibit additional volatility. Some of these securities may receive little or no collateral protection from the underlying assets and are thus subject to the risk of default described under "Credit Risk." The risk of such defaults is generally higher in the case of asset-backed, mortgage-backed and mortgage-related investments that include so-called "sub-prime" mortgages (which are loans made to borrowers with low credit ratings or other factors that increase the risk of default). The structure of some of these securities may be complex and there may be less available information than other types of debt securities. Additionally, asset-backed, mortgage-related and mortgage-backed securities are subject to risks associated with their structure and the nature of the assets underlying the securities and the servicing of those assets. Certain asset-backed, mortgage-related and mortgage-backed securities may face valuation difficulties and may be less liquid than other types of asset-backed, mortgage-related and mortgage-backed securities, or debt securities.

The mortgage loans underlying privately issued mortgage-related securities may not be subject to the same underwriting requirements for the underlying mortgages that are applicable to those mortgage-related securities that have government or government-sponsored entity guarantees. As a result, the mortgage loans underlying privately issued mortgage-related securities may have less favorable collateral, credit risk or other underwriting characteristics than government or government-sponsored mortgage-related securities and have wider variances in a number of terms including interest rate, term, size, purpose and borrower characteristics. In addition, certain mortgage-related securities which may include loans that originally qualified under standards established by government-sponsored entities (for example, certain REMICs that include Fannie Mae mortgages) are not considered as government securities for purposes of the Portfolio's investment strategies or policies. There is no government or government-sponsored guarantee for such privately issued investments.

The Portfolio may invest in collateralized mortgage obligations (CMOs). CMOs are debt obligations collateralized by mortgage loans or mortgage pass-through securities. CMOs are issued in multiple classes, and each class may have its own interest rate and/or final payment date. A class with an earlier final payment date may have certain preferences in receiving principal payments or earning interest. As a result, the value of some classes in which the Portfolio invests may be more volatile and may be subject to higher risk of nonpayment. The Portfolio may invest in interest-only (IO) and principal-only (PO) mortgage-related securities.

The values of IO and PO mortgage-backed securities are more volatile than other types of mortgage-related securities. They are very sensitive not only to changes in interest rates, but also to the rate of prepayments. A rapid or unexpected increase in prepayments can significantly depress the price of interest-only securities, while a rapid or unexpected decrease could have the same effect on principal-only securities. In addition, because there may be a drop in trading volume, an inability to find a ready buyer or the imposition of legal restrictions on the resale of securities, these instruments may be illiquid.

Government Securities Risk. The Portfolio may invest in securities issued or guaranteed by the U.S. government or its agencies and instrumentalities (such as securities issued by Ginnie Mae, Fannie Mae, or Freddie Mac). U.S. government securities are subject to market risk, interest rate risk and credit risk. Securities, such as those issued or guaranteed by Ginnie Mae or the U.S. Treasury, that are backed by the full faith and credit of the United States are guaranteed only as to the timely payment of interest and principal when held to maturity and the market prices for such securities will fluctuate. Notwithstanding these securities are backed by the full

More About the Portfolio (continued)

faith and credit of the United States, circumstances could arise that would prevent the payment of interest or principal. This would result in losses to the Portfolio. Securities issued or guaranteed by U.S. government-related organizations, such as Fannie Mae and Freddie Mac, are not backed by the full faith and credit of the U.S. government and no assurance can be given that the U.S. government will provide financial support. Therefore, U.S. government-related organizations may not have the funds to meet their payment obligations in the future. U.S. government securities include zero coupon securities, which tend to be subject to greater market risk than interest-paying securities of similar maturities.

High Yield Securities Risk. The Portfolio may invest up to 100% of its total assets in debt securities and other types of investments that are rated below investment grade. High yield, high risk securities and below investment grade securities are also known as junk bonds. Non-investment grade debt securities can be more sensitive to short-term corporate, economic and market developments. During periods of economic uncertainty and change, the market price of the Portfolio's investments and the Portfolio's net asset value may be volatile. Furthermore, though these investments generally provide a higher yield than higher-rated debt securities, the high degree of risk involved in these investments can result in substantial or total losses. These securities are considered to be high-risk investments, are speculative with respect to the capacity to pay interest and repay principal and may be issued by companies that are highly leveraged, less creditworthy or financially distressed. These securities are subject to greater risk of loss, greater sensitivity to economic changes, valuation difficulties, and a potential lack of a secondary or public market for the securities. The market price of these securities can change suddenly and unexpectedly. You should not invest in the Portfolio unless you are willing to assume the greater risk associated with high yield securities. As a result, the Portfolio is intended for investors who are able and willing to assume a high degree of risk.

Currency Risk. Changes in foreign currency exchange rates will affect the value of the Portfolio's securities and the price of the Portfolio's shares. Generally, when the value of the U.S. dollar rises in value relative to a foreign currency, an investment in that country loses value because that currency is worth fewer U.S. dollars. Currency exchange rates may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates. Devaluation of a currency by a country's government or banking authority also will have a significant impact on the value of any investments denominated in that currency. Currency markets generally are not as regulated as securities markets. The Portfolio may engage in various strategies to hedge against currency risk. These strategies may consist of use of foreign currency futures contracts. To the extent the Portfolio enters into such transactions in markets other than in the United States, the Portfolio may be subject to certain currency, settlement, liquidity, trading and other risks similar to those described in this prospectus with respect to the Portfolio's investments in foreign securities. In addition, the Portfolio may engage in such transactions as a substitute for securities in which the Portfolio invests, to increase exposure to a foreign currency, to shift exposure from one foreign currency to another or for risk management purposes or to increase income or gain to the Portfolio. While the Portfolio's use of hedging strategies is intended to reduce the volatility of the net asset value of Portfolio shares, the net asset value of the Portfolio will fluctuate. There can be no assurance that the Portfolio's hedging activities will be effective, and the Portfolio will incur costs in connection with the hedging. Currency hedging may limit the Portfolio's return if the relative values of currencies change. Furthermore, the Portfolio may only engage in hedging activities from time to time and may not necessarily be engaging in hedging activities when movements in currency exchange rates occur.

LIBOR Discontinuance or Unavailability Risk. The London Interbank Offering Rate ("LIBOR") is intended to represent the rate at which contributing banks may obtain short-term borrowings from each other in the London interbank market. On March 5, 2021, the U.K. Financial Conduct Authority ("FCA") publicly announced that (i) immediately after December 31, 2021, publication of the 1-week and 2-month U.S. Dollar LIBOR settings will permanently cease; (ii) immediately after June 30, 2023, publication of the overnight and 12-month U.S. Dollar LIBOR settings will permanently cease; and (iii) immediately after June 30, 2023, the 1-month, 3-month and 6-month U.S. Dollar LIBOR settings will cease to be provided or, subject to the FCA's consideration of the case, be provided on a synthetic basis and no longer be representative of the underlying market and economic reality they are intended to measure and that representativeness will not be restored. There is no assurance that the dates announced by the FCA will not change or that the administrator of LIBOR and/or regulators will not take further action that could impact the availability, composition or characteristics of LIBOR or the currencies and/or tenors for which LIBOR is published, and we recommend that you consult your advisors to stay informed of any such developments. In addition, certain regulated entities ceased entering into most new LIBOR contracts in connection with regulatory guidance or prohibitions. Public and private sector industry initiatives are currently underway to implement new or alternative reference rates to be used in place of LIBOR. There is no assurance that any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR prior to its discontinuance, unavailability or replacement, all of which may affect the value, volatility, liquidity or return on certain of a Portfolio's loans, notes, derivatives and other instruments or investments comprising some or all of a Portfolio's investments and result in costs incurred in connection with changing reference rates used for positions, closing out positions and entering into new trades. Certain of the Portfolio's investments may transition from LIBOR prior to the dates announced by the FCA. The transition from LIBOR to alternative reference rates may result in operational issues for the Portfolio or its investments. No assurances can be given as to the impact of the LIBOR transition (and the timing of any such impact) on the Portfolio and its investments.

Loan Risk. The Portfolio may invest in Loans that are rated below investment grade or the unrated equivalent. Like other high yield, corporate debt instruments, such Loans are subject to an increased risk of default in the payment of principal and interest as well as the other risks described under “**Interest Rate Risk**,” “**Credit Risk**,” “**High Yield Securities Risk**” and “**Foreign Securities and Emerging Markets Risk**.” Although certain Loans are secured by collateral, the Portfolio could experience delays or limitations in realizing on such collateral or have its interest subordinated to other indebtedness of the obligor. Loans are vulnerable to market sentiment such that economic conditions or other events may reduce the demand for Loans and cause their value to decline rapidly and unpredictably. Although the Portfolio limits its investments in illiquid securities to no more than 15% of the Portfolio’s net assets at the time of purchase, Loans that are deemed to be liquid at the time of purchase may become illiquid.

In recent years, there has been a broad trend of weaker or less restrictive covenant protections in the Loan market. Among other things, under such weaker or less restrictive covenants, borrowers might be able to exercise more flexibility with respect to certain activities than borrowers who are subject to stronger or more protective covenants. For example, borrowers might be able to incur more debt, including secured debt, return more capital to shareholders, remove or reduce assets that are designated as collateral securing Loans, increase the claims against assets that are permitted against collateral securing Loans or otherwise manage their business in ways that could impact creditors negatively. In addition, certain privately held borrowers might be permitted to file less frequent, less detailed or less timely financial reporting or other information, which could negatively impact the value of the Loans issued by such borrowers. Each of these factors might negatively impact the Loans held by the Portfolio.

No active trading market may exist for some of the Loans and certain Loans may be subject to restrictions on resale. The inability to dispose of Loans in a timely fashion could result in losses to the Portfolio. In addition, the settlement period for Loans is uncertain as there is no standardized settlement schedule applicable to such investments. Certain Loans may take more than seven days to settle. Because some Loans that the Portfolio invests in may have a more limited secondary market, liquidity and valuation risk is more pronounced for the Portfolio than for funds that invest primarily in other types of fixed income instruments or equity securities. Typically, Loans are not registered securities and are not listed on any national securities exchange. Consequently, there may be less public information available about the Portfolio’s investments and the market for certain Loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods. As a result, the Portfolio may be more dependent upon the analytical ability of its adviser. In addition, certain Loans may not be considered securities under the federal securities laws and, therefore, investments in such Loans may not be subject to certain protections under those laws.

When the Portfolio acquires a loan participation, the Portfolio typically enters into a contractual relationship with the lender or third party selling such participations, but not the borrower. As a result, in addition to the credit risk of the borrower, the Portfolio assumes the credit risk of the seller of the loan participation and any other party’s interposition between the Portfolio and the borrower. Under a loan participation, the Portfolio may have no direct rights to enforce the terms of the loan against the borrower. The Portfolio may not benefit directly from the collateral supporting the loan in which it has purchased the loan participation or assignment.

Affiliates of the adviser may participate in the primary and secondary market for Loans. Because of limitations imposed by applicable law, the presence of the adviser’s affiliates in the Loan market may restrict the Portfolio’s ability to acquire some Loans, affect the timing of such acquisition or affect the price at which the Loan is acquired. Also, because the adviser may wish to invest in the publicly traded securities of an obligor, it may not have access to material non-public information regarding the obligor to which other investors have access. Loans are subject to prepayment risks. Gains and losses associated with prepayments will increase or decrease the Portfolio’s yield and the income available for distribution by the Portfolio. When Loans are prepaid, the Portfolio may have to reinvest in securities with a lower yield or fail to recover additional amounts (i.e., premiums) paid for Loans, resulting in an unexpected capital loss and/or a decrease in the amount of dividends and yield.

Inflation-Linked Securities Risk. Inflation-linked debt securities are subject to the effects of changes in market interest rates caused by factors other than inflation (real interest rates). In general, the price of an inflation-linked security tends to decrease when real interest rates increase and can increase when real interest rates decrease. Interest payments on inflation-linked securities are unpredictable and will fluctuate as the principal and interest are adjusted for inflation. Any increase in the principal amount of an inflation-linked debt security will be considered taxable ordinary income, even though the Portfolio will not receive the principal until maturity. There can be no assurance that the inflation index used will accurately measure the real rate of inflation in the prices of goods and services. The Portfolio’s investments in inflation-linked securities may lose value in the event that the actual rate of inflation is different than the rate of the inflation index. In addition, inflation-linked securities are subject to the risk that the CPI-U or other relevant index may be discontinued, fundamentally altered in a manner materially adverse to the interests of an investor in the securities, altered by legislation or Executive Order in a materially adverse manner to the interests of an investor in the securities or substituted with an alternative index.

More About the Portfolio (continued)

Transactions and Liquidity Risk. The Portfolio could experience a loss when selling securities to meet redemption requests and its liquidity may be negatively impacted. The risk of loss increases if the redemption requests are large or frequent, occur in times of overall market turmoil or declining prices for the securities sold, or when the securities the Portfolio wishes to, or is required to, sell are illiquid. To the extent a large proportion of shares of the Portfolio are held by a small number of shareholders (or a single shareholder) including funds or accounts over which the adviser or its affiliates have investment discretion, the Portfolio is subject to the risk that these shareholders will purchase or redeem Portfolio shares in large amounts rapidly or unexpectedly, including as a result of an asset allocation decision made by the adviser or its affiliates. In addition to the other risks described in this section, these transactions could adversely affect the ability of the Portfolio to conduct its investment program. The Portfolio may be unable to sell illiquid securities at its desired time or price or the price at which the securities have been valued for purposes of the Portfolio's net asset value. Illiquidity can be caused by a drop in overall market trading volume, an inability to find a ready buyer or legal restrictions on the securities' resale. Other market participants may be attempting to sell debt securities at the same time as the Portfolio, causing downward pricing pressure and contributing to illiquidity. The capacity for bond dealers to engage in trading or "make a market" in debt securities has not kept pace with the growth of bond markets. This could potentially lead to decreased liquidity and increased volatility in the debt markets. Liquidity and valuation risk may be magnified in a rising interest rate environment, when credit quality is deteriorating or in other circumstances where investor redemptions from fixed income mutual funds may be higher than normal. Certain securities that were liquid when purchased may later become illiquid, particularly in times of overall economic distress. Similarly, large purchases of Portfolio shares may adversely affect the Portfolio's performance to the extent that the Portfolio is delayed in investing new cash and is required to maintain a larger cash position than it ordinarily would. Large redemptions also could accelerate the realization of capital gains, increase the Portfolio's transaction costs and impact the Portfolio's performance.

ETF and Other Investment Company Risk. The Portfolio may invest in shares of other investment companies, including ETFs. Shareholders bear both their proportionate share of the Portfolio's expenses and similar expenses of the underlying investment company or ETF when the Portfolio invests in shares of another investment company or ETF. The Portfolio is subject to the risks associated with the ETF or investment company's investments. The price and movement of an ETF or closed-end fund designed to track an index may not track the index and may result in a loss. In addition, ETFs and closed-end investment companies may trade at a price above (premium) or below (discount) their net asset value, especially during periods of significant market volatility or stress, causing investors to pay significantly more or less than the value of the ETF's underlying portfolio. Certain ETFs or closed-end funds traded on exchanges may be thinly traded and experience large spreads between the "ask" price quoted by a seller and the "bid" price offered by a buyer. The Portfolio may invest in investment companies that include common and preferred shares of closed-end funds. In addition to the risks applicable to investment companies generally, to the extent that the Portfolio invests in auction rate preferred shares of closed-end funds, such securities are subject to additional risks.

The Portfolio may also invest in pooled investment vehicles that are not registered investment companies or commodity pools. These pooled investment vehicles do not have the protections available to those types of investments under federal securities or commodities laws. For example, unlike registered investment companies, these vehicles are not subject to federal securities laws that limit transactions with affiliates, require redemption of shares, or limit sales load. Although shares of these vehicles may be traded on an exchange, there may be no active market for such shares and such shares may be highly illiquid.

Preferred Stock Risk. The Portfolio may invest in preferred stock. Preferred stock generally has a preference as to dividends and liquidation over an issuer's common stock but ranks junior to debt securities in an issuer's capital structure. Unlike interest payments on debt securities, preferred stock dividends are payable only if declared by the issuer's board of directors. Preferred stock also may be subject to optional or mandatory redemption provisions.

Because preferred stocks generally pay dividends only after the issuing company makes required payments to holders of its bonds and other debt, the value of preferred stocks generally is more sensitive than bonds and other debt to actual or perceived changes in the company's financial condition or prospects.

European Market Risk. The Portfolio's performance will be affected by political, social and economic conditions in Europe, such as growth of the economic output (the gross national product), the rate of inflation, the rate at which capital is reinvested into European economies, the success of governmental actions to reduce budget deficits, the resource self-sufficiency of European countries and interest and monetary exchange rates between European countries. European financial markets may experience volatility due to concerns about high government debt levels, credit rating downgrades, rising unemployment, the future of the euro as a common currency, possible restructuring of government debt and other government measures responding to those concerns, and fiscal and monetary controls imposed on member countries of the European Union. The risk of investing in Europe may be heightened due to steps taken by the United Kingdom to exit the European Union. On January 31, 2020, the United Kingdom officially withdrew from the European Union. On December 30, 2020, the European Union and the United Kingdom signed the EU-UK Trade and Cooperation Agreement ("TCA"), an agreement on the terms governing certain aspects of the European Union's and the United Kingdom's relationship, many of which are still to be determined, including those related to financial services. Notwithstanding the TCA, significant uncertainty remains in the market regarding the ramifications of the United Kingdom's withdrawal from the European Union. The

impact on the United Kingdom and European economies and the broader global economy could be significant, resulting in increased volatility and illiquidity, currency fluctuations, impacts on arrangements for trading and on other existing cross-border cooperation arrangements (whether economic, tax, fiscal, legal, regulatory or otherwise), and in potentially lower growth for companies in the United Kingdom. Europe and globally, which could have an adverse effect on the value of the Portfolio's investments. In addition, if one or more other countries were to exit the European Union or abandon the use of the euro as a currency, the value of investments tied to those countries or the euro could decline significantly and unpredictably.

The Portfolio's performance may also be impacted by civil conflicts and more, including the recent invasion of Ukraine by Russia. Any such disruptions caused by Russian military action or other actions (including cyberattacks and espionage) or resulting actual and threatened responses to such activity, including purchasing and financing restrictions, boycotts or changes in consumer or purchaser preferences, sanctions, tariffs or cyberattacks could have a severe adverse effect on the region, including significant negative impacts on the economy and the markets for certain securities and commodities, such as oil and natural gas, as well as other sectors. These and any related events could have significant impact on a Portfolio's performance and the value of an investment in the Portfolio.

Cyber Security Risk. As the use of technology has become more prevalent in the course of business, the Portfolio has become more susceptible to operational and financial risks associated with cyber security, including: theft, loss, misuse, improper release, corruption and destruction of, or unauthorized access to, confidential or highly restricted data relating to a Portfolio and its shareholders; and compromises or failures to systems, networks, devices and applications relating to the operations of a Portfolio and its service providers. Cyber security risks may result in financial losses to a Portfolio and its shareholders; the inability of a Portfolio to transact business with its shareholders; delays or mistakes in the calculation of a Portfolio's NAV or other materials provided to shareholders; the inability to process transactions with shareholders or other parties; violations of privacy and other laws; regulatory fines, penalties and reputational damage; and compliance and remediation costs, legal fees and other expenses. A Portfolio's service providers (including, but not limited to, the Adviser, any sub-advisers, administrator, transfer agent, and custodian or their agents), financial intermediaries, companies in which a Portfolio invests and parties with which a Portfolio engages in portfolio or other transactions also may be adversely impacted by cyber security risks in their own businesses, which could result in losses to a Portfolio or its shareholders. While measures have been developed which are designed to reduce the risks associated with cyber security, there is no guarantee that those measures will be effective, particularly since the Portfolio does not directly control the cyber security defenses or plans of their service providers, financial intermediaries and companies in which they invest or with which they do business.

Volcker Rule Risk. Pursuant to section 619 of the Dodd-Frank Wall Street Reform and Consumer Protection Act and certain rules promulgated thereunder known as the Volcker Rule, if the adviser and/or its affiliates own 25% or more of the outstanding ownership interests of the Portfolio after the permitted seeding period from the implementation of the Portfolio's investment strategy, the Portfolio could be subject to restrictions on trading that would adversely impact the Portfolio's ability to execute its investment strategy. Generally, the permitted seeding period is three years from the implementation of the Portfolio's investment strategy. As a result, the adviser and/or its affiliates may be required to reduce their ownership interests in the Portfolio at a time that is sooner than would otherwise be desirable, which may result in the Portfolio's liquidation or, if the Portfolio is able to continue operating, may result in losses, increased transaction costs and adverse tax consequences as a result of the sale of portfolio securities.

Securities Lending Risk. To generate additional income, certain underlying funds may lend up to 33 ⅓% of such underlying fund's total assets pursuant to agreements requiring that the loan be continuously secured by collateral equal to at least 100% of the market value plus accrued interest on the securities lent. Securities lending involves counterparty risk, including the risk that the loaned securities may not be returned or returned in a timely manner and/or a loss of rights in the collateral if the borrower or the lending agent defaults or fails financially. This risk is increased when an underlying fund's loans are concentrated with a single or limited number of borrowers. The earnings on the collateral invested may not be sufficient to pay fees incurred in connection with the loan. Also, the principal value of the collateral invested may decline and may not be sufficient to pay back the borrower for the amount of the collateral posted. There are no limits on the number of borrowers an underlying fund may use and an underlying fund may lend securities to only one or a small group of borrowers. Underlying funds participating in securities lending bear the risk of loss in connection with investments of the cash collateral received from the borrower, which do not trigger additional collateral requirements from the borrower. To the extent that the value or return of an underlying fund's investments of the cash collateral declines below the amount owed to a borrower, the underlying fund may incur losses that exceed the amount it earned on lending the security. In situations where the adviser does not believe that it is prudent to sell the cash collateral investments in the market, an underlying fund may borrow money to repay the borrower the amount of cash collateral owed to the borrower upon return of the loaned securities. This will result in financial leverage, which may cause the underlying fund to be more volatile because financial leverage tends to exaggerate the effect of any increase or decrease in the value of the underlying fund's portfolio securities.

Smaller Company Risk. Investments in smaller, newer companies may be riskier, less liquid, more volatile and more vulnerable to economic, market and industry changes than investments in larger, more-established companies. The securities of smaller companies may trade less frequently and in smaller volumes than securities of larger companies. In addition, smaller companies may be more vulnerable to economic, market and industry changes. As a result, in the price of debtor equity issued by such companies

More About the Portfolio (continued)

changes may be more sudden or erratic than the prices of other securities, especially over the short term. Because smaller companies may have limited product lines, markets or financial resources or may depend on a few key employees, they may be more susceptible to particular economic events or competitive factors than large capitalization companies. This may cause unexpected and frequent decreases in the value of the Portfolio's investments.

Prepayment and Call Risk. The issuers of mortgage-backed and asset-backed securities and other callable securities may be able to repay principal in advance, especially when interest rates fall. Changes in prepayment rates can affect the return on investment and yield of mortgage-backed and asset-backed securities. When mortgages and other obligations are prepaid and when securities are called, the Portfolio may have to reinvest in securities with a lower yield. The Portfolio also may fail to recover additional amounts (i.e., premiums) paid for securities with higher interest rates, resulting in an unexpected capital loss. Furthermore, some asset-backed securities may have additional risk because they may receive little or no collateral protection from the underlying assets, and are also subject to the risk of default described under "Credit Risk." The risk of such defaults is generally higher in the case of mortgage-backed investments that include so-called "sub-prime" mortgages.

Equity-Linked Notes Risk. Investing in ELNs may be more costly to the Portfolio than if the Portfolio had invested in the underlying instruments directly. Investments in ELNs often have risks similar to the underlying instruments, which include market risk. In addition, since ELNs are in note form, ELNs are subject to certain debt securities risks, such as credit or counterparty risk. Should the prices of the underlying instruments move in an unexpected manner, the Portfolio may not achieve the anticipated benefits of an investment in an ELN, and may realize losses, which could be significant and could include the Portfolio's entire principal investment. Investments in ELNs are also subject to liquidity risk, which may make ELNs difficult to sell and value. A lack of liquidity may also cause the value of the ELN to decline. In addition, ELNs may exhibit price behavior that does not correlate with the underlying securities. The Portfolio's ELN investments are subject to the risk that issuers and/or counterparties will fail to make payments when due or default completely. Prices of the Portfolio's ELN investments may be adversely affected if any of the issuers or counterparties it is invested in are subject to an actual or perceived deterioration in their credit quality.

CONFLICTS OF INTEREST

An investment in the Portfolio is subject to a number of actual or potential conflicts of interest. For example, the adviser and/or its affiliates provide a variety of different services to the Portfolio, for which the Portfolio compensates them. As a result, the adviser and/or its affiliates have an incentive to enter into arrangements with the Portfolio, and face conflicts of interest when balancing that incentive against the best interests of the Portfolio. In addition, the adviser's authority to invest in J.P. Morgan Funds creates conflicts of interest. For actively managed underlying funds, the adviser limits its selection to J.P. Morgan Funds. For passive ETFs, the adviser expects to use a J.P. Morgan ETF unless the adviser determines that the investment is not available. To the extent the adviser determines that an investment in a J.P. Morgan passive ETF is not available, only then will the adviser consider an unaffiliated underlying fund. Investing in J.P. Morgan Funds could cause the Portfolio to incur higher fees and will cause the adviser and/or its affiliates to receive greater compensation, increase assets under management or support particular investment strategies or J.P. Morgan Funds. These conflicts also could cause the adviser to adjust its asset class target or actual allocation to provide for increased use of J.P. Morgan Funds. The adviser and/or its affiliates also face conflicts of interest in their service as investment adviser to other clients, and, from time to time, make investment decisions that differ from and/or negatively impact those made by the adviser on behalf of the Portfolio. In addition, affiliates of the adviser provide a broad range of services and products to their clients and are major participants in the global currency, equity, commodity, fixed income and other markets in which the Portfolio invests or will invest. In certain circumstances by providing services and products to their clients, these affiliates' activities will disadvantage or restrict the Portfolio and/or benefit these affiliates. The adviser may also acquire material non-public information which would negatively affect the adviser's ability to transact in securities for the Portfolio. JPMorgan and the Portfolio have adopted policies and procedures reasonably designed to appropriately prevent, limit or mitigate conflicts of interest. In addition, many of the activities that create these conflicts of interest are limited and/or prohibited by law, unless an exception is available. For more information about conflicts of interest, see the Potential Conflicts of Interest section in the Statement of Additional Information.

TEMPORARY DEFENSIVE POSITIONS

For liquidity and to respond to unusual market conditions, the Portfolio may invest all or most of its total assets in cash and **cash equivalents** for temporary defensive purposes. These investments may result in a lower yield than lower-quality or longer-term investments.

WHAT IS A CASH EQUIVALENT?

Cash equivalents are highly liquid, high-quality instruments with maturities of three months or less on the date they are purchased. They include securities issued by the U.S. government, its agencies and instrumentalities, repurchase agreements, certificates of deposit, bankers' acceptances, commercial paper, money market mutual funds and bank deposit accounts.

While the Portfolio is engaged in a temporary defensive position, it may not meet its investment objective. These investments may also be inconsistent with the Portfolio's main investment strategies. Therefore, the Portfolio will pursue a temporary defensive position only when market conditions warrant.

ADDITIONAL FEE WAIVER AND/OR EXPENSE REIMBURSEMENT

Service providers to the Portfolio may, from time to time, voluntarily waive all or a portion of any fees to which they are entitled and/or reimburse certain expenses as they may determine from time to time. The Portfolio's service providers may discontinue or modify these voluntary actions at any time without notice. Performance for the Portfolio reflects the voluntary waiver of fees and/or reimbursement of expenses, if any. Without these voluntary waivers and/or expense reimbursements, performance would have been less favorable.

EXPENSE LIMITATIONS

The shares of the J.P. Morgan Funds in which the Portfolio may invest a portion of its assets impose a separate investment advisory fee. To avoid charging an investment advisory fee at an effective rate above 0.42% for the Portfolio on affiliated investments, the adviser will waive investment advisory fees with respect to the Portfolio in an amount equal to the weighted average pro rata amount of affiliated investment advisory fees charged by the underlying J.P. Morgan Funds. These waivers may be in addition to any waiver required to meet the Portfolio's contractual expense limitation, but will not exceed the Portfolio's advisory fee.

EXPENSES OF UNDERLYING FUNDS

The Portfolio invests in Class R6 Shares or the equivalent of the underlying funds to the extent that they are available. To the extent that an underlying fund does not offer Class R6 Shares, the Portfolio will invest in Class R5 Shares. To the extent that an underlying fund does not offer Class R5 Shares, the Portfolio may invest in Institutional Class or Class L Shares, as applicable, or to the extent that an underlying fund does not have Institutional Class or Class L Shares, the Portfolio may invest in Class I Shares of an underlying fund. Institutional Class or Class L and Class I Shares have higher expenses than Class R5 and Class R6 Shares, and Class R5 Shares have higher expenses than Class R6 Shares. To the extent that the Portfolio invests in shares of the underlying funds that do not offer Class R6 Shares, the Portfolio's total expenses will be higher. Acquired Fund Fees and Expenses will vary with changes in expenses of the underlying funds, as well as allocations of the Portfolio's assets, and may be higher or lower than those shown. Acquired Fund Fees and Expenses include dividend expenses related to short sales by the underlying funds.

The Portfolio's Management and Administration

The Portfolio is a series of JPMorgan Insurance Trust, a Massachusetts business trust (the Trust). The Trust is governed by the Board of Trustees which is responsible for overseeing all business activities of the Portfolio.

The Portfolio operates in a multiple class structure. A multiple class portfolio is an open-end investment company that issues two or more classes of securities representing interests in the same investment portfolio.

Each class in a multiple class portfolio can set its own transaction minimums and may vary with respect to expenses for distribution, administration and shareholder services. This means that one class could offer access to the Portfolio on different terms than another class. Certain classes may be more appropriate for a particular investor.

The Portfolio may issue other classes of shares that have different expense levels and performance and different requirements for who may invest. Call 1-800-480-4111 to obtain more information concerning the Portfolio's other share classes. A Financial Intermediary who receives compensation for selling Portfolio shares may receive a different amount of compensation for sales of different classes of shares.

The Portfolio's Investment Adviser

J.P. Morgan Investment Management Inc. (JPMIM) acts as investment adviser to the Portfolio and makes the day-to-day investment decisions for the Portfolio. In rendering investment advisory services to certain Portfolios, JPMIM uses the portfolio management, research and other resources of a foreign (non-U.S.) affiliate of JPMIM and may provide services to a Portfolio through a "participating affiliate" arrangement, as that term is used in relief granted by the staff of the SEC. Under this relief, U.S. registered investment advisers are allowed to use portfolio management or research resources of advisory affiliates subject to the regulatory supervision of the registered investment adviser.

JPMIM is a wholly-owned subsidiary of JPMorgan Asset Management Holdings Inc., which is a wholly-owned subsidiary of JPMorgan Chase & Co. (JPMorgan Chase), a bank holding company. JPMIM is located at 383 Madison Avenue, New York, NY 10179.

During the most recent fiscal year ended 12/31/21, JPMIM was paid a management fee of 0.23% of the Portfolio's average daily net assets.

A discussion of the basis the Board of Trustees of the Trust used in reapproving the investment advisory agreement for the Portfolio is available in the annual report for the most recent fiscal year ended December 31.

The Portfolio Managers

The Portfolio is managed by JPMIM's Multi-Asset Solutions Team (MAS). The members of MAS who are primarily responsible for the management and oversight of the Portfolio are Michael Schoenhaut, Managing Director and CFA charterholder, Eric J. Bernbaum, Executive Director and CFA charterholder, Jeffrey A. Geller, Managing Director and CFA charterholder and Gary Herbert, Managing Director and CFA charterholder. The portfolio managers establish and monitor the strategy and tactical allocations for the Portfolio and focus on portfolio construction, investment strategy selection and risk management. Additionally, they are assisted by multiple specialist teams who support the strategies of the Portfolio within the parameters established by the portfolio management team. Mr. Schoenhaut has been an employee of JPMIM since 1997 and a portfolio manager of the Portfolio since its inception. Mr. Bernbaum has been an employee of JPMIM and member of MAS since 2008 and portfolio manager of the Portfolio since 2014. As CIO for the Americas of MAS and an employee of JPMIM since 2006, Mr. Geller has investment oversight responsibility for accounts managed by MAS and has been a portfolio manager of the Portfolio since its inception. Mr. Herbert has been an employee of JPMIM and the Head of GTAA and Diversified Strategies in the U.S for MAS since 2020 and a portfolio manager of the Portfolio since 2021. Prior to joining JPMIM, Mr. Herbert was the Head of Global Credit at Brandywine Global LLC.

The Statement of Additional Information provides additional information about the portfolio managers' compensation, other accounts managed by the portfolio managers and the portfolio managers' ownership of securities in the Portfolio.

The Portfolio's Administrator

JPMIM (the Administrator) provides administration services and oversees the Portfolio's other service providers. JPMIM receives the following annual fee from the Portfolio for administration services: 0.075% of the first \$10 billion of average daily net assets of the Portfolio, plus 0.050% of average daily net assets of the Portfolio between \$10 billion and \$20 billion, plus 0.025% of average daily net assets of the Portfolio between \$20 billion and \$25 billion, plus 0.010% of average daily net assets of the Portfolio over \$25 billion.

The Portfolio's Distributor

JPMorgan Distribution Services, Inc. (the Distributor or JPMDS) is the distributor for the Portfolio. The Distributor is an affiliate of JPMIM.

Additional Compensation to Financial Intermediaries

JPMIM, JPMS, and, from time to time, other affiliates of JPMorgan Chase may also, at their own expense and out of their own legitimate profits, provide additional cash payments to Financial Intermediaries who sell shares of the Portfolio. For the Portfolio, Financial Intermediaries include insurance companies and their affiliated broker-dealers, retirement or 401(k) plan administrators and others, including various affiliates of JPMorgan Chase, that have entered into an agreement with the Distributor. These additional cash payments are generally made to Financial Intermediaries that provide shareholder or administrative services to variable insurance contract owners or Eligible Plan participants or marketing support.

Shareholder Information

PRICING PORTFOLIO SHARES

How are Portfolio Shares Priced?

Shares are sold at net asset value (NAV) per share. Shares are also redeemed at NAV. The NAV of each class within the Portfolio varies, primarily because each class has different class specific expenses such as distribution fees.

The NAV per share of a class of the Portfolio is equal to the value of all the assets attributable to that class, minus the liabilities attributable to that class, divided by the number of outstanding shares of that class. The following is a summary of valuation procedures generally used to value the J.P. Morgan Funds' investments.

Securities for which market quotations are readily available are generally valued at their current market value. Other securities and assets, including securities for which market quotations are not readily available; market quotations are determined not to be reliable; or, their value has been materially affected by events occurring after the close of trading on the exchange or market on which the security is principally traded but before the Portfolio's NAV is calculated, may be valued at fair value in accordance with policies and procedures adopted by the J.P. Morgan Funds' Board of Trustees. Fair value represents a good faith determination of the value of a security or other asset based upon specifically applied procedures. Fair valuation may require subjective determinations. There can be no assurance that the fair value of an asset is the price at which the asset could have been sold during the period in which the particular fair value was used in determining the Portfolio's NAV.

Equity securities listed on a North American, Central American, South American or Caribbean securities exchange are generally valued at the last sale price on the exchange on which the security is principally traded. Other foreign equity securities are fair valued using quotations from an independent pricing service, as applicable. The value of securities listed on the NASDAQ Stock Market, Inc. is generally the NASDAQ official closing price.

Fixed income securities are valued using prices supplied by an approved independent third party or affiliated pricing services or broker/dealers. Those prices are determined using a variety of inputs and factors as more fully described in the Statement of Additional Information.

Assets and liabilities initially expressed in foreign currencies are converted into U.S. dollars at the prevailing market rates from an approved independent pricing service as of 4:00 p.m. ET.

Shares of ETFs are generally valued at the last sale price on the exchange on which the ETF is principally traded. Shares of open-end investment companies are valued at their respective NAVs.

Options traded on U.S. securities exchanges are valued at the composite mean price, using the National Best Bid and Offer quotes.

Options traded on foreign exchanges are valued at the settled price, or if no settled price is available, at the last sale price available prior to the calculation of the Portfolio's NAV and will be fair valued by applying fair value factors provided by independent pricing services, as applicable, for any options involving equity reference obligations listed on exchanges other than North American, Central American, South American or Caribbean securities exchanges.

Exchange traded futures are valued at the last sale price available prior to the calculation of the Portfolio's NAV. Any futures involving equity reference obligations listed on exchanges other than North American, Central American, South American or Caribbean securities exchanges will be fair valued by applying fair value factors provided by independent pricing services, as applicable.

Non-listed over-the-counter options and futures are valued utilizing market quotations provided by approved pricing services.

Swaps and structured notes are priced generally by an approved independent third party or affiliated pricing service or at an evaluated price provided by a counterparty or broker/ dealer.

Any derivatives involving equity reference obligations listed on exchanges other than North American, Central American, South American or Caribbean securities exchanges will be fair valued by applying fair value factor provided by independent pricing services, as applicable.

NAV is calculated each business day as of the close of the NYSE, which is typically 4:00 p.m. ET. On occasion, the NYSE will close before 4:00 p.m. ET. When that happens, NAV will be calculated as of the time the Portfolio closes. The Portfolio will not treat an intraday unscheduled disruption or closure in NYSE trading as a closure of the NYSE and will calculate NAV as of 4:00 p.m., ET if the particular disruption or closure directly affects only the NYSE. The price at which a purchase is effected is based on the next calculation of NAV after the order is received in proper form in accordance with this prospectus. To the extent the Portfolio invests in securities that are primarily listed on foreign exchanges or other markets that trade on weekends or other days when the Portfolio does not price its shares, the value of the Portfolio's shares may change on days when you will not be able to purchase or redeem your shares.

When can Portfolio Shares be Purchased?

Purchases may be made on any business day for the Portfolio. This includes any day that the Portfolio is open for business, other than weekends and days on which the NYSE is closed.

PURCHASING PORTFOLIO SHARES

Who can Purchase Shares of the Portfolio?

Shares of the Portfolio are sold to separate accounts of insurance companies investing on instructions of contract owners of variable insurance contracts. Purchasers of variable insurance contracts will not own shares of the Portfolio. Rather, all shares will be owned by the insurance companies and held through their separate accounts for the benefit of purchasers of variable insurance contracts. Shares are also available to Eligible Plans for the benefit of their participants. All investments in the Portfolio are credited to the shareholder's account in the form of full or fractional shares of the designated Portfolio. Purchases are processed on any day on which the Portfolio is open for business. If purchase orders are received by an insurance company from its variable insurance contract holders or by an Eligible Plan from its participants before the Portfolio's Closing Time, the order will be effective at the NAV per share calculated that day, provided that the order and federal funds are received by the Portfolio in proper form on the next business day. The insurance company or Eligible Plan administrator or trustee is responsible for properly transmitting purchase orders and federal funds.

Share ownership is electronically recorded; therefore, no certificate will be issued.

The interests of different separate accounts and Eligible Plans are not always the same, and material, irreconcilable conflicts may arise. The Board of Trustees will monitor events for such conflicts and, should they arise, will determine what action, if any, should be taken.

Federal law requires the Portfolio to obtain, verify and record an accountholder's name, principal place of business and Employer Identification Number or other government issued identification when opening an account. The Portfolio may require additional information in order to open a corporate account or under certain other circumstances. This information will be used by the Portfolio or its transfer agent to attempt to verify the accountholder's identity. The Portfolio may not be able to establish an account if the accountholder does not provide the necessary information. In addition, the Portfolio may suspend or limit account transactions while it is in the process of attempting to verify the accountholder's identity. If the Portfolio is unable to verify the accountholder's identity after an account is established, the Portfolio may be required to involuntarily redeem the accountholder's shares and close the account. Losses associated with such involuntary redemption may be borne by the investor.

Shares of the Portfolio have not been registered for sale outside of the United States. This prospectus is not intended for distribution to prospective investors outside of the United States. The Portfolio generally does not market or sell shares to investors domiciled outside of the United States, even, with regard to individuals, if they are citizens or lawful permanent residents of the United States.

REDEEMING PORTFOLIO SHARES

Portfolio shares may be sold at any time by the separate accounts of the insurance companies issuing the variable insurance contracts or Eligible Plans. Individuals may not place sell orders directly with the Portfolio. Redemptions are processed on any day on which the Portfolio is open for business. If redemption orders are received by an insurance company from its variable insurance contract holders or by an Eligible Plan from its participants before the Portfolio's Closing Time, the order will be effective at the NAV per share calculated that day, provided that the order is received by the Portfolio in proper form on the next business day. The insurance company or Eligible Plan administrator or trustee is responsible for properly transmitting redemption orders. The length of time that the Portfolios typically expect to pay redemption proceeds depends on the method of payment and the agreement between the insurance company or Eligible Plan administrator or trustee and the Portfolios. The Portfolios typically expect to pay redemption proceeds to the insurance company or Eligible Plan within 1 to 3 business days following the Portfolio's receipt of the redemption order from the insurance company or Eligible Plan. Payment of redemption proceeds to the insurance company or Eligible Plan may take longer than the time a Portfolio typically expects and may take up to seven days as permitted by the 1940 Act. Variable insurance contract owners should consult the applicable variable insurance contract prospectus and Eligible Plan participants should consult the Eligible Plan's administrator or trustee for more information about redeeming Portfolio shares.

The Portfolio may suspend the ability to redeem when:

1. Trading on the NYSE is restricted;
2. The NYSE is closed (other than weekend and holiday closings);
3. Federal securities laws permit;

Shareholder Information (continued)

4. The SEC has permitted a suspension; or
5. An emergency exists, as determined by the SEC.

Generally, all redemptions will be for cash. The J.P. Morgan Funds typically expect to satisfy redemption requests by selling portfolio assets or by using holdings of cash or cash equivalents. On a less regular basis, the Portfolios may also satisfy redemption requests by borrowing from another Portfolio, by drawing on a line of credit from a bank, or using other short-term borrowings from its custodian. These methods may be used during both normal and stressed market conditions. In addition to paying redemption proceeds in cash, if shares redeemed are worth \$250,000 or more, the Portfolios reserve the right to pay part or all of the redemption proceeds in readily marketable securities instead of cash. If payment is made in securities, the Portfolio will value the securities selected in the same manner in which it computes its NAV. This process minimizes the effect of large redemptions on the Portfolio and its remaining shareholders. If an insurance company or Eligible Plan receives a redemption in-kind, securities received may be subject to market risk and taxable gains and brokerage or other charges in converting the securities to cash. While the Portfolios do not routinely use redemptions in-kind, the Portfolios reserve the right to use redemptions in-kind to manage the impact of large redemptions on the Portfolios. Redemption in-kind proceeds will typically be made by delivering a pro-rata amount of a Portfolio's holdings that are readily marketable securities to the redeeming insurance company or Eligible Plan within seven days after the Portfolio's receipt of the redemption order.

ABUSIVE TRADING

The Portfolio does not authorize market timing. Market timing is an investment strategy using frequent purchases and redemptions in an attempt to profit from short-term market movements. Market timing may result in dilution of the value of Portfolio shares held by long-term variable insurance contract owners or participants in Eligible Plans, disrupt portfolio management and increase Portfolio expenses for all shareholders. Although market timing may affect any fund, these risks may be higher for funds that invest significantly in non-U.S. securities or thinly traded securities (e.g., certain small cap securities), such as international, global or emerging market funds or small cap funds. For example, when the Portfolio invests in securities trading principally in non-U.S. markets that close prior to the close of the NYSE, market timers may seek to take advantage of the difference between the prices of these securities at the close of their non-U.S. markets and the value of such securities when the Portfolio calculates its net asset value. To the extent that the Portfolio is unable to identify market timers effectively, long-term investors may be adversely affected.

The Portfolio's Board of Trustees has adopted policies and procedures with respect to market timing. Because purchase and sale transactions are submitted to the Portfolio on an aggregated basis by the insurance company issuing the variable insurance contract or by an Eligible Plan, the Portfolio is limited in identifying and eliminating market timing transactions by individual variable insurance contract owners or Eligible Plan participants. In an aggregated transaction, the purchases of Portfolio shares and the redemptions of Portfolio shares are netted against one another and the identity of individual purchasers and redeemers are not known by the Portfolio. The Portfolio, therefore, has to rely upon the insurance companies to police restrictions in the variable insurance contracts or according to the insurance company's administrative policies; those restrictions will vary from variable insurance contract to variable insurance contract. Similarly, with respect to Eligible Plans, the Portfolio is often dependent upon the Eligible Plan's financial intermediaries who utilize their own policies and procedures to identify market timers.

The Portfolio has attempted to put safeguards in place to assure that financial intermediaries, including insurance companies, have implemented procedures designed to deter market timing and abusive trading. The Portfolio will seek to monitor for signs of market timing activities, such as unusual cash flows, and may request information from the applicable insurance company or Eligible Plan to determine whether or not market timing or abusive trading is involved. In addition, under agreements with insurance companies, the Portfolio may request transaction information from the insurance companies at any time in order to determine whether there has been short-term trading by the insurance companies' contract owners. The Portfolio will request that the insurance company provide individual contract owner level detail to the Portfolio at its request. Under such agreements, the Portfolio or the Distributor may restrict or prohibit any purchase orders with respect to one investor, a related group of investors or their agent(s), where they detect a pattern of purchases and sales of Portfolio shares that indicates market timing or trading they determine is abusive to the extent possible.

The Portfolio will seek to apply these policies as uniformly as practicable. It is, however, more difficult to locate and eliminate individual market timers in the separate accounts or Eligible Plans, and there can be no assurances that the Portfolio will be able to effectively identify and eliminate market timing and abusive trading in the Portfolio. Variable insurance contract owners should consult the prospectus for their variable insurance contract for additional information on contract level restrictions relating to market timing.

In addition to rejecting purchase orders in connection with suspected market timing activities, the Portfolio can reject a purchase order in certain other circumstances including when it does not think a purchase order is in the best interest of the Portfolio and/or its shareholders or if it determines the trading to be abusive.

RULE 12b-1 FEES

The Portfolio described in this prospectus has adopted a Distribution Plan under Rule 12b-1 that allows it to pay distribution fees for the sale and distribution of the Class 2 Shares of the Portfolio. These fees are called “Rule 12b-1 fees.” Rule 12b-1 fees are paid by the Portfolio to the Distributor as compensation for its services and expenses in connection with the sale and distribution of Portfolio shares. The Distributor in turn pays all or part of these Rule 12b-1 fees to financial intermediaries, including participating insurance companies or their affiliates that have agreements with the Distributor to sell shares of the Portfolio. The Distributor may pay Rule 12b-1 fees to its affiliates. Payments are not tied to actual expenses incurred. The Portfolio pays annual distribution fees of up to 0.25% of the average daily net assets attributable to Class 2 Shares. Because Rule 12b-1 fees are paid out of Portfolio assets on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges.

VOTING AND SHAREHOLDER MEETINGS

How are Shares of the Portfolio Voted?

As long as required by the SEC, the insurance company that issued your variable insurance contract will solicit voting instructions from the purchasers of variable insurance contracts with respect to any matters that are presented to a vote of shareholders. Therefore, to the extent an insurance company is required to vote the total Portfolio shares held in its separate accounts, including those owned by the insurance company, on a proportional basis, it is possible that a small number of variable insurance contract owners would be able to determine the outcome of a matter. The Portfolio or class votes separately on matters relating solely to that Portfolio or class or which affect that Portfolio or class differently. However, all shareholders will have equal voting rights on matters that affect all shareholders equally. Shareholders shall be entitled to one vote for each share held.

When are Shareholder Meetings Held?

The Trust does not hold annual meetings of shareholders but may hold special meetings. Special meetings are held, for example, to elect or remove trustees, change a Portfolio’s fundamental investment objective, or approve an investment advisory contract.

QUESTIONS

Any questions regarding the Portfolio should be directed to JPMorgan Insurance Trust, P.O. Box 219143, Kansas City, MO 64121-9143, 1-800-480-4111. All questions regarding variable insurance contracts should be directed to the address or telephone number indicated in the prospectus or other literature that you received when you purchased your variable insurance contract.

DISTRIBUTIONS AND TAXES

The Portfolio intends to qualify each taxable year as a regulated investment company for U.S. federal income tax purposes pursuant to the provisions of Subchapter M of the Internal Revenue Code of 1986, as amended (the Code) and the regulations thereunder, and to meet all other requirements necessary for it to be relieved of U.S. federal income taxes on income and gains it distributes to the separate accounts of the insurance companies or Eligible Plans. The Portfolio will distribute any net investment income and net realized capital gains at least annually. Both types of distributions will be made in shares of the Portfolio unless an election is made on behalf of a separate account or Eligible Plan to receive some or all of the distribution in cash.

The discussions below are based on the assumption that the shares of the Portfolio will be respected as owned by insurance company separate accounts and Eligible Plans. If this is not the case, the person(s) determined to own the shares will be currently taxed on Portfolio distributions and redemption proceeds. Because insurance company separate accounts and Eligible Plans will be the only shareholders of the Portfolio, no attempt is made here to describe the tax treatment of Portfolio shareholders that are generally taxable.

Tax Consequences to Variable Insurance Contract Owners

Generally, owners of variable insurance contracts are not taxed currently on income or gains realized with respect to such contracts. However, some distributions from such contracts may be taxable at ordinary income tax rates. In addition, distributions made to an owner who is younger than 59½ may be subject to a 10% penalty tax. Investors should ask their own tax advisors for more information on their own tax situation, including possible state or local taxes.

Shareholder Information (continued)

In order for investors to receive the favorable tax treatment available to holders of variable insurance contracts, the separate accounts underlying such contracts, as well as the Portfolios in which such accounts invest, must meet certain diversification requirements under Section 817(h) of the Code and the regulations thereunder. These requirements, which are in addition to the diversification requirements imposed on the Portfolio by the 1940 Act and Subchapter M of the Code, place certain limitations on assets of each insurance company separate account used to fund variable contracts. The Portfolio intends to comply with these requirements. If the Portfolio does not meet such requirements, income allocable to the contracts will be taxable currently to the contract owners.

In addition, if owners of variable insurance contracts have an impermissible level of control over the investments underlying their contracts, the advantageous tax treatment provided to insurance company separate accounts under the Code will no longer be available.

Under Treasury regulations, insurance companies holding the separate accounts must report to the Internal Revenue Service losses above a certain amount resulting from a sale or disposition of Portfolio shares.

For a further discussion of the tax consequences of variable annuity and variable life contracts, please refer to the prospectuses or other documents that you received when you purchased your variable annuity or variable life product.

Tax Consequences to Eligible Plan Participants

Generally, Eligible Plan participants are not taxed currently on distributions of net investment income and capital gains to such plans. Contributions to these plans may be tax deductible, although distributions from these plans are generally taxable.

In the case of Roth IRA accounts, contributions are not tax deductible, but distributions from the plan may be tax free.

Tax Consequences of Certain Portfolio Investments

The Portfolio is generally subject to foreign withholding or other foreign taxes, which in some cases can be significant on any income or gain from investments in foreign stocks or securities. In that case, the Portfolio's total return on those securities would be decreased. The Portfolio may generally deduct these taxes in computing its taxable income. Rather than deducting these foreign taxes, the Portfolio that invests more than 50% of its assets in the stock or securities of foreign corporations or foreign governments at the end of its taxable year may make an election to treat a proportionate amount of eligible foreign taxes as constituting a distribution to each shareholder, which would, subject to certain limitations, generally allow the shareholder to either (i) to credit that proportionate amount of taxes against U.S. Federal income tax liability as a foreign tax credit or (ii) to take that amount as an itemized deduction.

The Portfolio's investments in certain debt obligations, mortgage-backed securities, asset-backed securities, REIT securities and derivative instruments may require the Portfolio to accrue and distribute income not yet received. In order to generate sufficient cash to make the requisite distributions, the Portfolio may be required to liquidate other investments in its portfolio that it otherwise would have continued to hold, including when it is not advantageous to do so. The Portfolio's investment in REIT securities also may result in the Portfolio's receipt of cash in excess of the REIT's earnings.

The Portfolio's transactions in future contracts, swaps and other derivatives will be subject to special tax rules, the effect of which may be to accelerate income to the Portfolio, defer losses to the Portfolio and cause adjustments in the holding periods of the Portfolio's securities. These rules could therefore affect the amount and timing of distributions to shareholders.

Please refer to the Statement of Additional Information for more information regarding the tax treatment of the Portfolio.

The above is a general summary of tax implications of investing in the Portfolio. Because each investor's tax consequences are unique, investors should consult their own tax advisors to see how investing in the Portfolio will affect their individual tax situations.

AVAILABILITY OF PROXY VOTING RECORD

The Trustees have delegated the authority to vote proxies for securities owned by the Portfolio to the applicable investment adviser. A copy of the Portfolio's voting record for the most recent 12-month period ended June 30 is available on the SEC's website at www.sec.gov or at www.jpmorgan.com/variableinsuranceportfolios no later than August 31 of each year. The Portfolio's proxy voting record will include, among other things, a brief description of the matter voted on for each portfolio security and will state how each vote was cast, for example, for or against the proposal.

PORTFOLIO HOLDINGS DISCLOSURE

No sooner than 30 days after the end of each month, the Portfolio will make available upon request an uncertified, complete schedule of its portfolio holdings as of the last day of that month. Not later than 60 days after the end of each fiscal quarter, the Portfolio will make available a complete schedule of its portfolio holdings as of the last day of that quarter.

In addition to providing hard copies upon request, the Portfolio will post these quarterly schedules on www.jpmorgan.com/variableinsuranceportfolios and on the SEC's website at www.sec.gov. From time to time, the Portfolio may post portfolio holdings on the J.P. Morgan Funds website on a more timely basis.

Shareholders may request portfolio holdings schedules at no charge by calling 1-800-480-4111. A description of the Portfolio's policies and procedures with respect to the disclosure of the Portfolio's holdings is available in the Statement of Additional Information.

Financial Highlights

The financial highlights tables are intended to help you understand the Portfolio's financial performance for the past five fiscal years or the period of the Portfolio's operations, as applicable. Certain information reflects financial results for a single Portfolio share. The total returns in the tables represent the rate that an investor would have earned (or lost) on an investment in the Portfolio (assuming reinvestment of all dividends and distributions). The total returns do not include charges that will be imposed by variable insurance contracts or by Eligible Plans. If these charges were reflected, returns would be lower than those shown. This information for each period presented has been audited by PricewaterhouseCoopers LLP, whose report, along with the Portfolio's financial statements, are included in the Portfolio's annual report, which is available upon request.

To the extent the Portfolio invests in other funds, the Total Annual Fund Operating Expenses included in the fee table will not correlate to the ratio of expenses to average net assets in the financial highlights below.

	Per share operating performance						
	Net asset value, beginning of period	Investment operations			Distributions		
		Net investment income (loss) (a)(b)	Net realized and unrealized gains (losses) on investments	Total from investment operations	Net investment income	Net realized gain	Total distributions
JPMorgan Insurance Trust Income Builder Portfolio Class 2							
Year Ended December 31, 2021	\$ 11.28	\$0.35	\$ 0.57	\$ 0.92	\$(0.31)	\$(0.04)	\$(0.35)
Year Ended December 31, 2020	11.12	0.33	0.19	0.52	(0.36)	—	(0.36)
Year Ended December 31, 2019	10.08	0.37	1.04	1.41	(0.34)	(0.03)	(0.37)
Year Ended December 31, 2018	10.62	0.39	(0.91)	(0.52)	—	(0.02)	(0.02)
Year Ended December 31, 2017	9.92	0.35	0.81	1.16	(0.36)	(0.10)	(0.46)

- (a) Net investment income (loss) is affected by timing of distributions from Underlying Funds.
- (b) Calculated based upon average shares outstanding.
- (c) Includes adjustments in accordance with accounting principles generally accepted in the United States of America and as such, the net asset values for financial reporting purposes and the returns based upon those net asset values may differ from the net asset values and returns for shareholder transactions.
- (d) Total returns do not include charges that will be imposed by variable insurance contracts or by Eligible Plans. If these charges were reflected, returns would be lower than those shown.
- (e) Does not include expenses of Underlying Funds.
- (f) Includes earnings credits and interest expense, if applicable, each of which is less than 0.005% unless otherwise noted.

Ratios/Supplemental data
